

WOOD BUFFALO ENVIRONMENTAL ASSOCIATION
MONTHLY AMBIENT AIR QUALITY MONITORING REPORT
2021
REPORT HISTORY

Original report release date: March 2021

Revised report release date: May 4, 2022

Revision 1: Resubmission of Ozone data at Anzac and Nitrogen Dioxide data at Janvier

In the annual data review of the 2021 data by the Alberta Environment and Parks, two issues were identified:

1. The reported Ozone (O_3) 1-hour average on January 30, 2021, at 02:00 MST was 74.5 ppb. The WBBA confirmed the spike was invalid due to an erroneous 5-min value which was inadvertently flagged incorrectly.
2. On January 12, 2022, at 16:00 MST, the calibration flags of the multi-channel analyzer, NO/NO₂/NO_x, were not applied equally to all individual channels, specifically the NO_x.

As result, O_3 data from Anzac and NO/NO₂/NO_x from Janvier of January 2021 was revised and flagged appropriately. On May 4, 2022, the monthly report, and data reports, for each affected station, were re-submitted to the Electronic Transfer System (ETS).

Original report release date: March 2021

Revised report release date: December 21, 2022

Revision 2 – Resubmission of Wind Data at Buffalo Viewpoint.

During the annual audit of the wind speed and wind direction (WS/WD) sensor, it was found that the sensor at Buffalo Viewpoint Air Monitoring Station (AMS) was not aligned with each set point used to calibrate the instrument. Further investigation of the faulty sensor determined that the internal components were not moving in unison, as designed, due to a loose set screw, which led to inaccurate wind direction readings. The misalignment was non-uniform, ranging from 15 to 23 degrees, depending on the conditions, and was undetectable during monthly field visual checks and data validation.

A review of wind direction data from Buffalo Viewpoint AMS compared to other air monitoring stations in the Wood Buffalo Environmental Association network showed an approximate and inconsistent, 15-to-23-degree shift in wind direction data at Buffalo Viewpoint AMS. The 2021 audit, conducted on June 3, had concluded that the sensor was in excellent working condition, and the data shift appears to occur after re-installation; therefore, it is believed the issue with the set screw occurred shortly after the 2021 audit, upon installation. Due to the non-uniformity of the sensor-shift since the last annual audit, wind data at Buffalo Viewpoint AMS from June 3, 2021, to October 6, 2022, was revised and flagged appropriately.

As a result, the WS/WD sensor at Buffalo Viewpoint AMS operated less than 90% for the month of June 2021 through to the month of October 2022, which is a contravention of Clause DQ 4-C, of Chapter 6 of

the Air Monitoring Directive (2016, as amended). The verbal report to Alberta Environment and Parks (AEP) was done on October 28, 2022 (reference number 406184).

Buffalo Viewpoint AMS monthly report and data report along with the network summary have been updated from the original version. The updated monthly report and revised data were re-submitted to the Electronic Transfer System (ETS) on November 25, 2022.

RE: Annual Ambient Air Quality Monitoring Report 2021
Wood Buffalo Environmental Association

Enclosed is the 2021 Annual Ambient Air Quality Monitoring Report for the Wood Buffalo Environmental Association regional air monitoring network.

The continuous ambient air quality monitoring network stations are:

AMS01 - Fort McKay - Bertha Ganter	AMS20 - MacKay River
AMS02 - Mildred Lake	AMS21 - Conklin
AMS03 - Lower Camp (Meteorology)	AMS22 - Janvier
AMS04 - Buffalo Viewpoint	AMS23 - Fort Hills
AMS05 - Mannix	AMS25 - Waskow ohci Pimâtsiwin
AMS06 - Patricia McInnes	AMS26 - Christina Lake
AMS07 - Athabasca Valley	AMS27 - Jackfish 2/3
AMS08 - Fort Chipewyan	AMS29 - Surmont 2
AMS09 - Barge Landing	AMS30 - Ells River
AMS11 - Lower Camp (Air Quality)	AMS501 - Leismer
AMS13 - Fort McKay South	AMS505 - Sawbones Bay
AMS14 - Anzac	AMS506 - Jackfish 1
AMS17 - Wapasu	AMS507 - Kirby South
AMS18 - Stony Mountain	AMS508 - Kirby North
AMS19 - Firebag	

This report is submitted by the WB EA on behalf of its members. This report may also satisfy the ambient air reporting requirements in industry members' EPEA Approvals (as amended):

1. Introduction

The WBEA operates the largest airshed in the largest municipality in Canada. As a multi-stakeholder, community-based, not-for-profit association, the WBEA monitors the air in the Regional Municipality of Wood Buffalo (RMWB) 24 hours a day and 365 days a year. The WBEA works closely with Alberta Environment and Parks (AEP), and funding for this work was provided to the WBEA through the Oil Sands Monitoring Program (OSM).

Air Monitoring Parameters

Table 1 provides a list of stations with their names and corresponding WBEA identification number, and the air quality parameters measured by continuous methods at each site. Parameters measured may include hydrogen sulphide (H₂S), total reduced sulphur (TRS), sulphur dioxide (SO₂), nitrogen dioxide (NO₂), ozone (O₃), fine particulate matter (PM_{2.5}) total hydrocarbons (THC), methane (CH₄), non-methane hydrocarbons (NMHC), carbon dioxide (CO₂), carbon monoxide (CO) and ammonia (NH₃). Sites are categorized based on the purpose for which they were installed.

Table 1. Summary of stations and parameters measured continuously at WBEA stations

Table 3 provides a list of stations and air quality parameters measured by time-integrated methods. Parameters measured may include volatile organic compounds (VOC), particulate matter less than 2.5 µm aerodynamic diameter (PM_{2.5}) including associated metal and ion analysis, particulate matter less than 10 µm aerodynamic diameter (PM₁₀), including associated metal and ion analysis, polycyclic aromatic hydrocarbons (PAH), wet precipitation, including major ion analysis.

Table 3. Summary of parameters measured using time-integrated methods at WBEA stations

Air Monitoring Station Locations

The map in Figure 1 shows the locations of all WBEA continuous air quality monitoring stations. Continuous monitoring stations are distributed throughout the RMWB from Fort Chipewyan in the North to Conklin in the South.

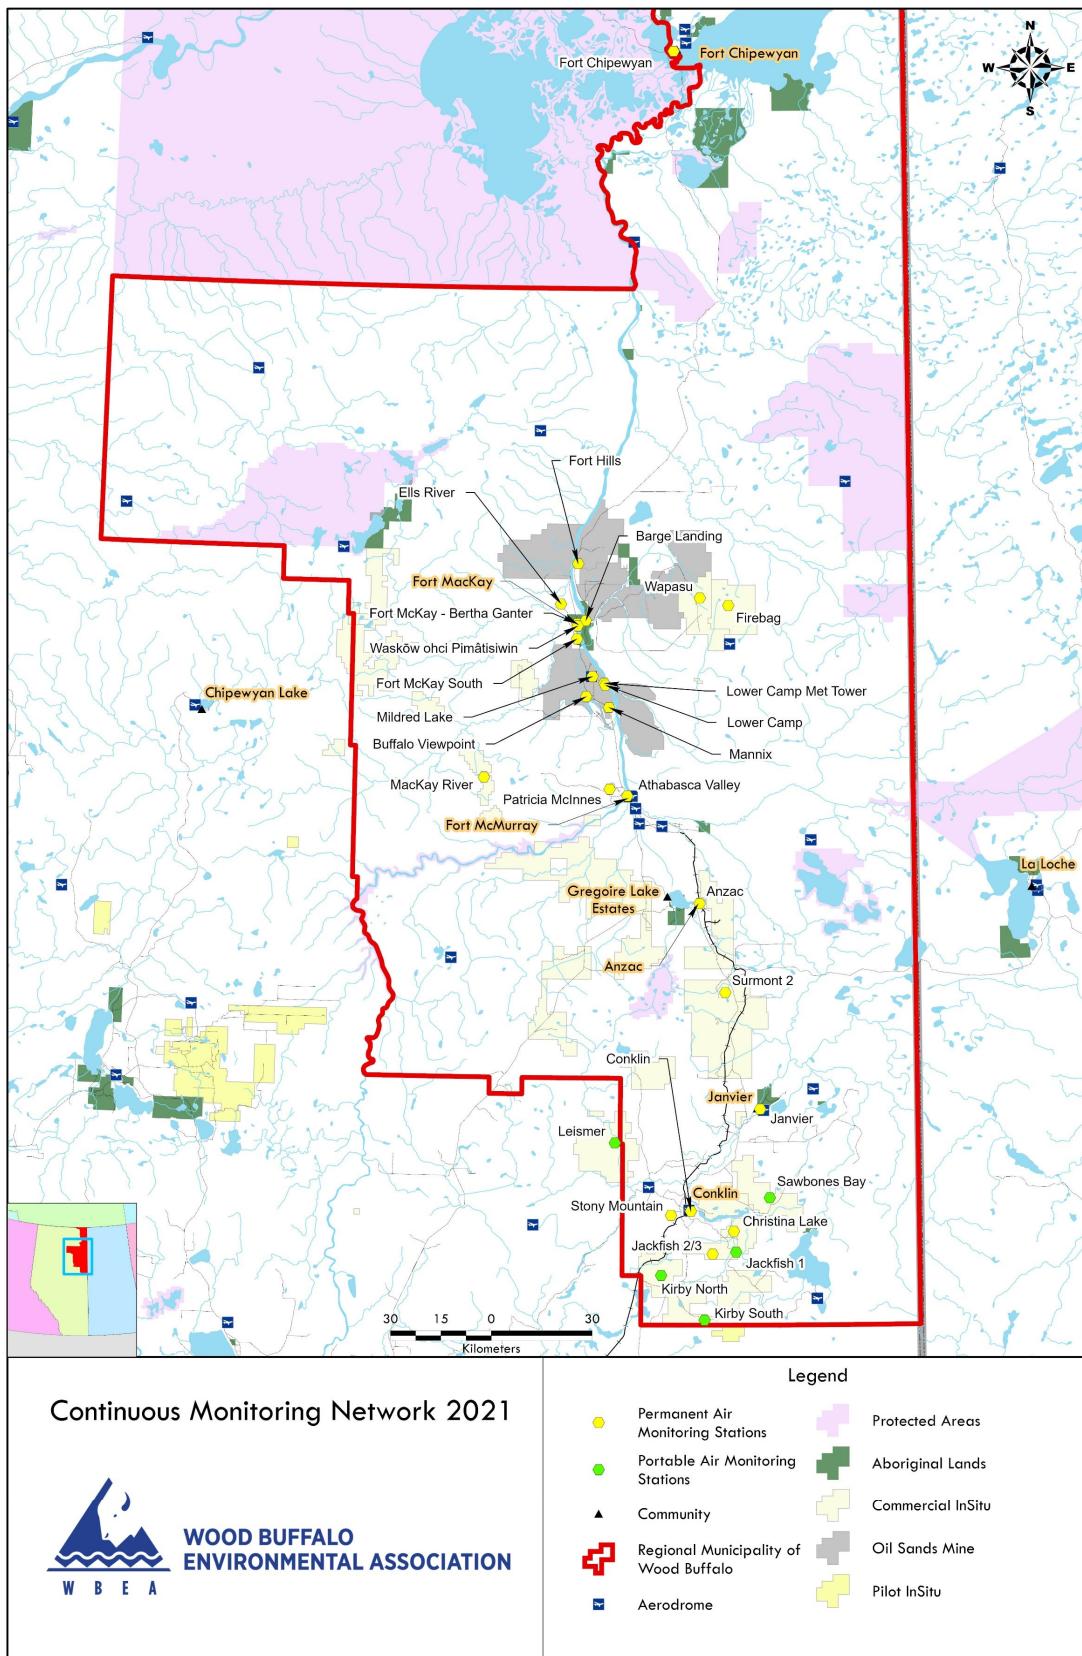

Figure 1: Continuous Air Monitoring Station Locations

2. Summary of Changes to the WBEA Air Monitoring Network

The WBEA relocated Kirby North air monitoring station to a new location within the Canadian Natural Resources Limited Kirby facility. Kirby North was removed from service on June 29, 2021 and was replaced with Kirby South on July 1, 2021. Kirby North and Kirby South fulfill EPEA approval number 237382-01-00. This station is equipped with ambient air quality analyzers for SO₂, H₂S, THC, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA deployed an ambient air monitoring station, Sawbones Bay, at the MEG Energy Christina Lake facility on July 1, 2021, to fulfill the requirements of EPEA approval number 216466-01, as amended. The current EPEA approval for the MEG Energy Christina Lake facility requires ambient air monitoring at the facility for six months per calendar year. This station is equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA completed ambient air quality monitoring at the Jackfish 1 air monitoring station, at the Canadian Natural Resources Limited Jackfish 1 facility on September 1, 2021, to fulfill the requirements of EPEA approval number 224816-00-00, as amended. The current EPEA approval for the Canadian Natural Jackfish 1 facility requires ambient air monitoring at the facility for six months per calendar year. This station was equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA deployed an ambient air quality monitoring station, Leismer, at the Athabasca Oil Leismer facility on October 1, 2021, to fulfill the requirements of EPEA approval number 241311-00, as amended. The current EPEA approval for the Athabasca Oil Leismer facility requires ambient air monitoring at the facility for three months per calendar year. This station was equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The following operational modifications are provided as per the Air Monitoring Directive requirements:

Table 4. Parameter changes to the WBEA network – 2021

Station	Station Name	Parameter	Date Effective	Comment
AMS01	Bertha Ganter – Fort McKay	H ₂ S	17-03-2021	New parameter
AMS09	Barge Landing	Wind Speed / Wind Direction 10 m	06-08-2021	Sensor relocated to 20m
AMS09	Barge Landing	Wind Speed / Wind Direction 20 m	06-08-2021	New sensor height to comply with AMD siting criteria.
AMS22	Janvier	Wind Speed / Wind Direction 10 m	23-09-2021	Sensor relocated to 20m
AMS22	Janvier	Wind Speed / Wind Direction 20 m	23-09-2021	New sensor height to comply with AMD siting criteria.
AMS18	Stony Mountain	Wind Speed / Wind Direction 10 m	27-10-2021	Sensor relocated to 20m
AMS18	Stony Mountain	Wind Speed / Wind Direction 20 m	27-10-2021	New sensor height to comply with AMD siting criteria.
AMS11	Lower Camp	Barometric Pressure Sensor	01-12-2021	New sensor installed at an industry members request.
AMS501	Kirby South	THC	02-09-2021	New parameter to comply with updated EPEA approval criteria.

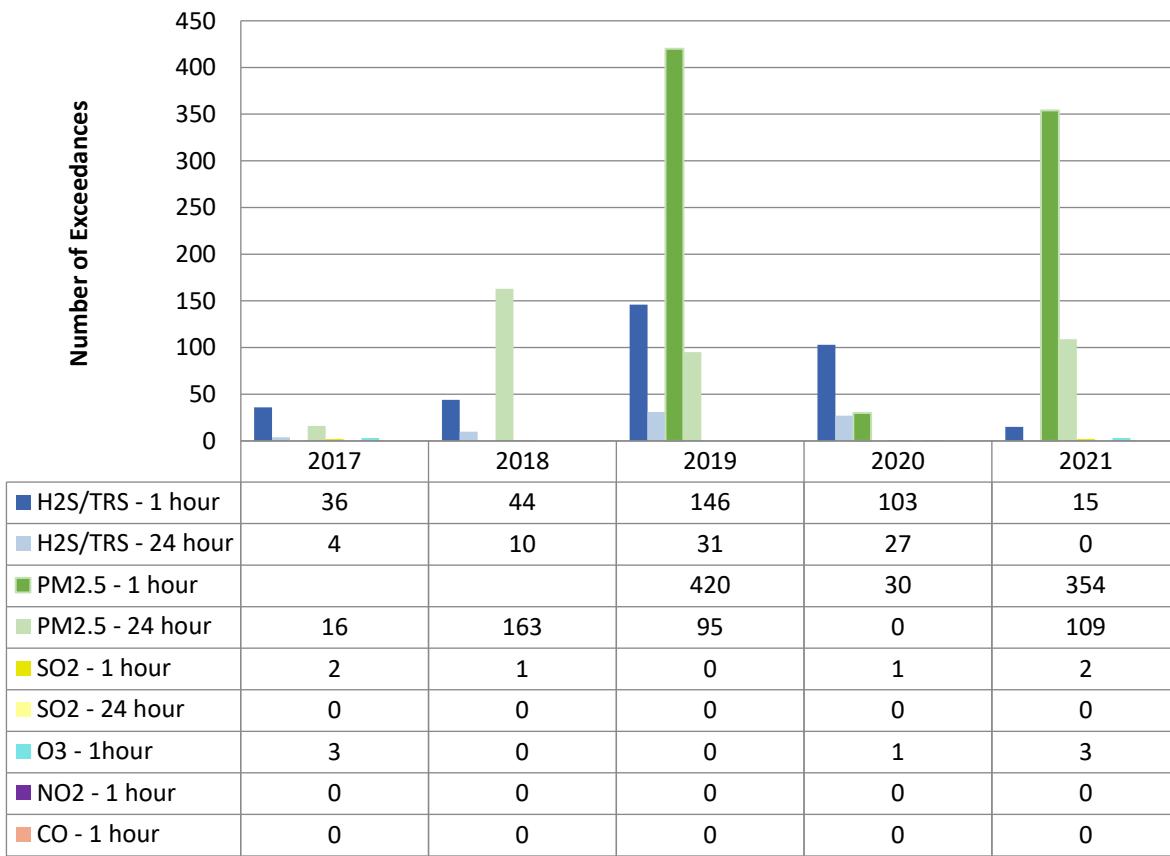

3. Concentrations in Excess of Alberta Ambient Air Quality Objectives and Guidelines

A detailed summary of ambient concentrations in excess of the Alberta Ambient Air Quality Objectives (AAAQOs) and Ambient Air Quality Guidelines (AAAQGs), including site, parameter, date & time, reference number, exceedance period, reported and final concentration, and status are included in Appendix I of the report. The summary of the previous 5-years of ambient concentrations that exceed the AAAQOs and AAAQGs are shown in Figure 3.

Please note, as the WBEA airshed reports ambient air concentrations of total reduced sulphur (TRS) that exceed the H₂S Ambient Air Quality Objectives, the H₂S summary in Figure 3 also includes the TRS concentrations that exceeded the H₂S objectives.

WBEA Ambient Air Monitoring Network Ground Level Concentrations in excess of AAAQOs and AAAQGs (2017-2021)

*The PM_{2.5} 1-hour AAAQG was established on January 1, 2019

Figure 3 Ambient Air Concentrations in excess of the AAAQO and AAAQG (2017-2021)

4. Operational Status – Regulatory Non-compliance Instrument Operations

In 2021, there were 37 incidents resulting in regulatory non-compliance of monitoring instruments. A detailed summary of these incidents, including date, reference number, description, location, issue, and remedial action are included in Appendix II of the report.

5. External Audits and Results

There were no external audits of WBEA ambient air monitoring stations conducted for the 2021 reporting period.

6. Monthly Report Revisions

The following revisions were identified in the following monthly reports:

Month	Revision	Details
January	Inclusion of CO and CO ₂ at Stony Mountain	During data validation, it was identified that CO and CO ₂ data at Stony Mountain had not been included in the data uploaded to ETS, and formerly the Airdata Warehouse, dating back to the installation of the analyzer on October 1, 2019. Data for these parameters were uploaded to the ETS for October 2019 – January 2021 on March 1, 2021. Ambient Air Monitoring Reports and Calibration Reports included these parameters and did not require revisions.
February	Revision of SO ₂ at Patricia McInnes and NO ₂ at Athabasca Valley	During routine data review, it was identified that SO ₂ baseline points for Patricia McInnes and NO ₂ baseline points for Athabasca Valley Air Monitoring Stations had inadvertently been left unaccepted for January 2021. On March 30, 2021, SO ₂ data for Patricia McInnes and NO ₂ data for Athabasca Valley for January 2021 was resubmitted to the Electronic Transfer System to include baseline corrections.
October	Revision of O ₃ at Patricia McInnes	A review of Ozone (O ₃) data from Patricia McInnes Air Monitoring Station (AMS) compared to other air monitoring stations in the Wood Buffalo Environmental Association network revealed that measured values at Patricia McInnes AMS were higher. A review of the analyzer responses to the automated daily zeros checks and calibration zeros responses during the monthly multipoint calibrations showed a significant difference between these two values. Further investigation determined that a longer than expected stabilization during the automated daily zero checks resulted in negative values recorded as analyzer responses. During acceptance for baseline correction, this resulted in an elevated baseline for this parameter. These negative values are artifacts of the external system and not the true response of the analyzer. Therefore, analyzer zero responses recorded during the monthly multipoint calibrations were used to baseline correct the ozone data. As a result, O ₃ data at Patricia McInnes AMS from June 2019 to May 2021 was revised. On October 12 through 15, 2021, the monthly reports and data reports, for each affected month, were resubmitted to the Electronic Transfer System (ETS).

7. 2017-2021 WBEA Data Compared to LARP Triggers and Limits

A summary of data from the WBEA air monitoring stations compared to the Lower Athabasca Regional Plan (LARP) trigger levels and limits for NO₂ and SO₂ is provided in Appendix III.

8. 2021 Annual Air Concentrations

This report contains a summary of operational times for the year, the monthly averages, the number of readings in excess of the AAAQO/G, frequency distributions of 1-hour data, and annual average concentration plots over the past five years. Annual average concentration plots have been provided for stations for which there is more than one year of data, and for which 12-month monitoring is completed. Calculation of annual averages are not provided for portable monitoring stations which are only required to monitor for 3 or 6 months per year, based on their EPEA approval.

Annual statistics for time-integrated monitoring results are provided.

If additional information is required, please contact either Emilie Briggs at (780) 747-8219 or the Wood Buffalo Environmental Association at (780) 799-4420.

Yours sincerely,

Wood Buffalo Environmental Association

The representative of the Person Responsible for this monitoring program is Emilie Briggs, Operations Manager, WBEA.

Report prepared and submitted by Asad Hidayat and Karina Fenwick of the WBEA and reviewed by Emilie Briggs of WBEA. The WBEA has retained the services of Whiteley Enterprises to conduct reporting functions on its behalf, specifically, Level 3 – Independent Assessment. As required, the contact information for WBEA staff is included below.

Asad Hidayat, Data Technician

WOOD BUFFALO ENVIRONMENTAL ASSOCIATION

CONTINUOUS AMBIENT AIR QUALITY MONITORING PROGRAM ANNUAL REPORT

APPENDIX II: SUMMARY OF MONTHLY OPERATIONAL TIMES BELOW 90 PERCENT AND NON-COMPLIANCES 2021

Operations, Data Collection,
QA/QC, Data Validation and Reporting by:
Wood Buffalo Environmental Association
Fort McMurray, Alberta

March 2022

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
24-Feb-21	376238	January	Janvier	The ozone analyzer at Janvier operated less than 90% of January 2021 due to a suspected issue with the UV light detector.	On January 2, 2021, the daily spans exceeded the 10% threshold. Throughout the first week of January, troubleshooting was conducted to identify the source of the failed span response. The cause is suspected to be an issue with the UV light detector in the O3 analyzer.	The analyzer was replaced with a backup unit on January 8 so that the analyzer could be brought back to the WBEA Centre for repair.
24-Feb-21	376240	February	Stony Mountain	The precipitation collector at Stony Mountain operated less than 90% of February 2021 due to overaccumulation of snow and resultant ice build-up inside the precipitation collector.	Overaccumulation of snow and resultant ice build-up inside the precipitation collector resulted in the recording of erroneous precipitation values. Data was flagged from the last known valid response to precipitation as observed and documented by a WBEA Field Technician, on February 3, 2021 until February 17, 2021.	The precipitation collector bucket was thawed and emptied on February 17, 2021
30-Mar-21	377231	February	Jackfish 1	The hydrogen sulfide analyzer at Jackfish 1 operated less than 90% of February 2021 due to a series of three different issues.	<ul style="list-style-type: none"> – Sample pump failure on February 13 through 16 interrupted the normal operations of the H₂S analyzer for 81 hours. On February 16, a replacement sample pump was installed, and a subsequent calibration was completed. – Following the installation of the new sample pump, it was identified that the SO₂ scrubber was not operating within criteria. The SO₂ scrubber was replaced on February 17 and was left to stabilize overnight. On February 18, the H₂S analyzer was calibrated and was found to be operating within criteria. Downtime associated with scrubber replacement resulted in a further 42 hours of downtime. – On February 20 through 23, the Jackfish 1 AMS station temperature dropped, affecting the H₂S analyzer for 65 hours. During a station visit on February 23, the thermal fuse in the HVAC unit was found to be blown, preventing the heater from operating. The fuse was replaced, and normal operations resumed on February 23 at 14:00. 	N/A
30-Mar-21	377232	February	Surmont 2	The hydrogen sulfide analyzer at Surmont 2 operated less than 90% of February 2021 due to a depleted hydrator.	On February 15, the daily span for the H ₂ S analyzer at Surmont 2 failed to meet criteria. A remotely triggered span on February 16 revealed a similar response. An on-site investigation on February 17 revealed a depleted hydrator. Maintenance was conducted to fill the hydrator and complete a subsequent analyzer calibration. Data was flagged as invalid from the last known valid response on February 14 until normal operations resumed on February 17, 2021, at 16:00 MST. This incident resulted in 87 hours of invalid data.	The hydrator was filled on February 17.
30-Mar-21	377233	February	Barge Landing	The total hydrocarbons analyzer at Barge Landing operated less than 90% of February 2021 due to the installation of an incorrect carrier gas.	Routine maintenance was conducted on February 19 to replace a depleted cylinder of carrier gas for the NMHC analyzer. The February 20 daily system check showed that all spans for this analyzer were outside AMD daily span target criteria. A station visit by the on-call technician on February 20 revealed that a helium cylinder had been mistakenly installed as the carrier gas for the NMHC analyzer. The helium cylinder was disconnected, and on February 21, a replacement nitrogen cylinder was installed, and the NMHC analyzer was replaced with a backup analyzer. The affected NMHC analyzer has been brought to the WBEA Centre for precautionary testing. Data was flagged as invalid from the last known valid response before the helium cylinder was installed on February 19, 2021 until normal operations resumed on February 22, 2021 at 15:00 MST. This incident resulted in 71 hours of invalid data.	WBEA will implement improved cylinder storage and identification practices to mitigate the risk of future occurrences of this issue.

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
26-Apr-21	378169	March	Anzac	The NO2 analyzer at Anzac operated less than 90% of March 2021 due to a human error during the monthly calibration.	<p>On March 11, the mixed calibration gas cylinder was replaced with a cylinder composed of NO and NOX only. This cylinder includes a small amount of NO2, creating a small difference in concentration between NO and NOx. The difference between NO and NOx was not captured on the calibration sheet, which affected the calculations of the GPT portion of the calibration. Following the identification of this issue, the calibration sheet was updated to include the correct NO and NOx concentration values, which revealed that the calibration had failed to meet AMD criteria. On March 16, the analyzer was recalibrated using the correct values. Data was invalidated from the initial calibration on March 11 until re-calibration on March 16, resulting in 114 hours of invalid data. Normal analyzer operations resumed at 12:00 on March 16.</p>	<p>The analyzer was re-calibrated on March 16.</p>
27-Apr-21	378308	March and April	Patricia McInnes	The ammonia analyzer at Patricia McInnes operated less than 90% of March and April 2021 due poor linearity following planned maintenance.	<p>There were three issues associated with the operation of the NH3 analyzer, contributing to 82 hours of downtime in March, and a minimum of 81 hours of downtime in April:</p> <ul style="list-style-type: none"> - The NH3 analyzer requires additional time to stabilize to ambient conditions following daily spans at the range required by the AMD, which is expected for this type of analyzer. Data following the daily spans have been reported as invalid for 48 hours in March, and 54 hours in April, to date. - Maintenance on March 24 to re-run the daily zero span check resulted in 3 hours of invalid data. - Following planned maintenance on March 30, the NH3 analyzer did not meet calibration criteria for linearity. The multi-point as found calibration had been within calibration criteria. Data was flagged from the beginning of the maintenance period until the analyzer was replaced with a backup unit, on April 2 at 16:00 MST. This incident resulted in 31 hours flagged as maintenance in March and 27 hours in April. 	<p>The analyzer was replaced with a backup unit on April 2.</p>

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
11-May-21	378572	April	Kirby North	The total hydrocarbons analyzer at Kirby North operated less than 90% of April due to failure of the zero air generator.	<p>During the daily system check on April 5, the THC baseline was observed to be elevated. A site visit on April 8 to address the elevated baseline revealed an issue with the zero air generator (ZAG). The ZAG was replaced with a backup unit, and a subsequent calibration was performed to bring the analyzer into compliance with AMD criteria. Data was flagged from the last valid daily zero/span on April 4 until the calibration following the ZAG replacement, resulting in 107 hours of invalid data. Regular operations resumed on April 8 at 17:00 MST. Additionally, the signal from the THC analyzer failed to communicate with the data logger on April 16. A follow-up site visit on April 17 required the analyzer power to be cycled to re-establish communications with the data logger, resulting in 14 additional hours of invalid data.</p>	<p>This incident was reviewed at a technical workshop on April 26 to provide training to staff on how to better identify instances of zero air generator failure.</p>
28-May-21	379261	April	Mannix	The total hydrocarbons analyzer at Mannix operated less than 90% of April due to a combination of factors.	<p>There were three issues associated with the operations of the NMHC analyzer, contributing to 93 hours of downtime:</p> <ul style="list-style-type: none"> – Unstable operation due to negative baseline dips on April 3 through April 8 resulted in 45 hours of invalid data. – Maintenance on April 16 to replace the calibration gas resulted in 4 hours of invalid data. – Fluctuating station temperatures from April 23 to April 27 resulted in 44 hours of invalid data. 	N/A
10-Jun-21	379616	May	Mackay River	The precipitation collector at Mackay River operated less than 90% of May due to a tripped GFI plug.	<p>On May 12, a WBEA Field Technician identified that the outlet supplying power to the precipitation collector was tripped. The breaker was reset, with power resuming on May 12 at 10:00 MST. During the data validation process, it was identified that the power outage began on April 30, resulting in a total of 274 hours of invalid data in May.</p>	<p>The breaker was reset on May 12.</p>
10-Jun-21	379617	May	Anzac	The wind speed and wind direction sensor at Anzac operated less than 90% of May due to the sensor becoming misaligned.	<p>During a monthly visual field inspection on May 7 to verify the performance of the sensor, a WBEA Field Technician found that the wind direction sensor was not aligned to true North. A calibration on May 12 confirmed the misalignment. The sensor orientation was corrected, and sensor operation was verified that day. During the data validation process, a comparison of wind direction data with nearby stations was used to determine that the sensor became misaligned on April 30. The wind speed and wind direction data at Anzac AMS was invalidated for 275 hours in May.</p>	<p>The sensor orientation was corrected on May 12.</p>
10-Jun-21	379618	May	Fort Hills	The wind speed and wind direction sensor at Fort Hills operated less than 90% of May due to the sensor reporting erroneous values.	<p>During the data validation process, a comparison of wind direction data with nearby stations revealed that the sensor response was not consistent with regional wind patterns beginning on May 5. On May 14, a WBEA Technician visually inspected the sensor and identified that the sensor had experienced water damage to the electrical circuit board due to the sensor cover becoming ajar from its housing. The Technician replaced the sensor and completed a subsequent audit of the system to verify sensor performance. The wind speed and wind direction data at Fort Hills AMS were invalidated for 204 hours in May.</p>	<p>The sensor was replaced on May 14.</p>
22-Jul-21	381580	June and July	Jackfish 2/3	The relative humidity sensor at Jackfish 2/3 operated less than 90% of June and July due to periodic sensor over-ranging.	<p>During routine daily system checks, it was identified that the RH measurements were over-ranging periodically, with the output signal of the sensor displaying values beyond 100%. On June 16, a WBEA Field Technician attempted to replace the sensor, however, upon installation the replacement sensor was non-operational. Therefore, the original sensor was reinstalled the following day. The relative humidity sensor data at Jackfish 2/3 AMS was invalidated for 82 hours in June, and has been invalidated for 163 hours in July, to date.</p>	<p>The sensor was replaced on August 17.</p>
22-Jul-21	381581	June and July	Lower Camp	The methane and non-methane hydrocarbon analyzer at Lower Camp air monitoring station operated less than 90% of June and July due to station temperature fluctuations.	<p>The HVAC unit in the air monitoring station failed to maintain a consistent temperature during elevated ambient temperatures in June and July. The fluctuating internal station temperature affected the analyzer response, resulting in periodic data loss. This issue was discovered during the data validation process.</p>	<p>The Lower Camp air monitoring station was replaced on August 24, 2021. The replacement air monitoring station is expected to have improved temperature stability.</p>

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
22-Jul-21	381582	June	Stony Mountain	The methane and non-methane hydrocarbon analyzer at Stony Mountain air monitoring station operated less than 90% of June due to a collapsed baseline.	On June 13, a daily system check revealed a collapsed baseline on the CH ₄ channel. On June 14, a WBEA Technician arrived at the station to investigate the source of the issue. The Technician completed several troubleshooting steps, however was unable to resolve the collapsed baseline. As no operational CH ₄ and NMHC analyzers were available to replace the broken unit, the analyzer was removed from service and brought back to the WBEA Centre for repair.	The analyzer was replaced with a backup unit on June 18.
26-Jul-21	381708	June and July	Patricia McInnes	The ammonia analyzer at Patricia McInnes operated less than 90% of June and July due to slow recovery following daily spans.	The NH ₃ analyzer requires additional time to stabilize to ambient conditions following daily spans at the range required by the AMD, which is expected for this type of analyzer. Data following the daily spans have been reported as invalid for 86 hours in June, and 101 hours in July, to date.	The WBEA plans to seek permission for a variance from the AEP Director regarding the frequency of daily zero/span checks or alternate solutions to minimize downtime.
26-Jul-21	381709	July	Fort Chipewyan	The ozone analyzer at Fort Chipewyan air monitoring station operated less than 90% of July due to instability in analyzer response.	Beginning in late June, the output signal of the O ₃ analyzer began indicating instability in analyzer response. On July 2 and 3, the O ₃ measurements were inconsistent with ambient readings comparable to the ozone analyzers in the WBEA network, and the daily QA checks failed to meet operational criteria. Technicians were deployed on June 5 to replace the O ₃ lamp. Lamp replacement briefly resolved the instability, however on July 7, the unstable response was resumed. On July 12, the analyzer was replaced with a backup unit and the original analyzer was brought to the WBEA Centre for further troubleshooting and repair.	A replacement analyzer was installed on July 12.
27-Jul-21	381740	June	Conklin	The relative humidity sensor at Conklin operated less than 90% of June due to periodic sensor over-ranging.	During routine daily system checks, it was identified that the RH measurements were over-ranging periodically, with the output signal of the sensor displaying values beyond 100%. On June 25, a WBEA Field Technician replaced the sensor, however, the replacement sensor also displayed values beyond 100%. On June 29, a second replacement sensor was installed, with normal operations resuming following installation of the replacement sensor. RH data at Conklin AMS was invalidated for 81 hours in June.	The sensor was replaced on June 29.

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
25-Aug-21	382631	July	Bertha Ganter Fort McKay	The ammonia analyzer at Bertha Ganter Fort McKay operated less than 90% of July due to sample pump failure and slow recovery following daily spans.	<p>There were two issues associated with the operation of the NH3 analyzer, contributing to 154 hours of downtime in July:</p> <ul style="list-style-type: none"> - The NH3 analyzer requires additional time to stabilize to ambient conditions following daily spans at the range required by the AMD, which is expected for this type of analyzer. Data following the daily spans have been reported as invalid for 55 hours in July. - The daily QA check on July 5 and 6 failed to meet operational criteria due to a degrading sample pump. On July 7, a WBEA Technician conducted maintenance to replace the sample pump. During monthly validation for the reporting, data was invalidated back to the last good span, on July 4, resulting in 75 hours of invalid data. The maintenance to replace the sample pump and complete a subsequent calibration resulted in an additional 24 hours of invalid data. 	<p>The WBEA plans to seek permission for a variance from the AEP Director regarding the frequency of daily zero/span checks or alternate solutions to minimize downtime.</p>
25-Aug-21	382632	August	Patricia McInnes	The methane and non-methane hydrocarbon analyzer at Patricia McInnes air monitoring station operated less than 90% of August due to the analyzer failing to adequately capture the methane peak.	This instrument is a semi-continuous gas chromatogram which depends upon the instrument capturing methane and non-methane peak response. Depending on routine instrument operations, the methane peak may shift out of the optimal data capture window. Field maintenance conducted on August 5th did not resolve the unstable operation. Subsequent maintenance to replace the actuator was conducted on August 9th. Following the actuator replacement, the analyzer was left flagged until a subsequent calibration could be completed the following day. Data was invalidated for 97 hours this reporting period, with normal operations resuming at 12:00 MST on August 10.	<p>The actuator was replaced and a subsequent calibration was completed on August 9th and 10th.</p>
25-Aug-21	382633	August	Lower Camp	The methane and non-methane hydrocarbon analyzer at Lower Camp air monitoring station operated less than 90% of June and July due to station temperature fluctuations.	The HVAC unit in the air monitoring station failed to maintain a consistent station temperature during above average seasonal temperatures in August. During routine daily system checks, it was identified that the fluctuating internal station temperature affected the analyzer response, resulting in periodic data loss. Temporary HVAC systems were installed in an effort to stabilize the station temperature.	<p>The Lower Camp air monitoring station was replaced in August 2021. The replacement air monitoring station is expected to have improved temperature stability.</p>
25-Aug-21	382634	July	Firebag	The wind speed and direction sensor operated less than 90% of July due to a cup becoming disconnected.	<p>During daily system checks on July 26, a WBEA Technician observed the wind speed signal to be inconsistent with the normal operations of the sensor. A response plan was initiated, and a site visit was planned for the earliest opportunity on July 29. During the site visit, a WBEA Technician visually inspected the sensor and identified that the cup assembly was disconnected from the wind speed sensor due to loosened cup arms. The Technician replaced the sensor and completed a subsequent calibration of the system to verify the sensor performance. The wind speed and wind direction data at Firebag AMS were invalidated for 89 hours in July 2021.</p>	<p>The sensor was replaced on July 29.</p>

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
25-Aug-21	382635	August	Ells River	The wind speed and direction sensor operated less than 90% of August due to a cup becoming disconnected.	During daily system checks on August 16, a WBEA Technician observed the wind speed signal to be inconsistent with the normal operations of the sensor. A response plan was initiated, and a station visit was planned for the same day. A visual inspection revealed that the cup assembly had disconnected from the wind speed sensor due to loosened cup arms. The Technician replaced the sensor and completed a subsequent calibration of the system to verify the sensor performance. Upon routine data validation, a comparison of Ells River data with nearby stations revealed that the Ells River wind direction sensor had begun failing on August 12. Therefore, the wind speed and wind direction data at Ells River AMS have conservatively been invalidated for 95 hours in August 2021.	The sensor was replaced on August 16.
25-Aug-21	382636	August	Jackfish 2/3	The relative humidity sensor at Jackfish 2/3 operated less than 90% of June and July due to periodic sensor over-ranging.	During routine daily system checks, it was identified that the RH measurements were over-ranging periodically, with the output signal of the sensor displaying values beyond 100%. The relative humidity sensor data was invalidated during periods of time when measurements were found to be inconsistent with other comparable RH sensors in the WBEA ambient network. Therefore, RH data at Jackfish 2/3 AMS has been invalidated for 143 hours in August, to date. The relative humidity sensor was replaced on August 17, with normal operations resuming at 14:00 MST.	The sensor was replaced on August 17.
1-Sep-21	382920	August	Patricia McInnes	The ammonia analyzer at Patricia McInnes operated less than 90% of August due to slow recovery following daily spans.	The AMD specifies the range at which the daily spans and monthly calibration are conducted on the NH3 analyzer. The NH3 analyzer requires additional time to stabilize to ambient conditions following daily spans and routine monthly multipoint calibrations at the range required by the AMD. Requiring additional time for stabilization after exposure to the high concentrations of NH3 gas required for daily spans and monthly calibration is a normal response of the NH3 analyzer. Data for two to five hours following the daily spans and monthly calibration have been reported as invalid for a total of 81 hours so far.	The WBEA plans to seek permission for a variance from the AEP Director regarding the frequency of daily zero/span checks or alternate solutions to minimize downtime.
28-Sep-21	383880	August	Stony Mountain	The carbon monoxide and carbon dioxide analyzers at Stony Mountain operated less than 90% of August due to the failure of the analyzers to recover to ambient conditions following a power outage.	Following a brief power outage on August 19, the CO and CO2 analyzers failed to return to normal operating conditions. The output signal of the CO analyzer flat lined, and the daily span response and subsequent calibration of the CO2 analyzer indicated that the analyzer was operating outside of AMD criteria.	The analyzers were reset and recalibrated on August 23.
28-Sep-21	383881	August	Barge Landing	Several air quality analyzers at Barge Landing operated less than 90% of August due to the replacement of the station shelter.	Replacement of Barge Landing AMS was required due to its advanced age, which had resulted in costly maintenance and safety concerns. During the week of August 2, the monitoring station shelter was replaced as part of planned monitoring network maintenance and upgrades. Maintenance associated with the station replacement resulted in 63 to 99 hours of invalid data. Following the station replacement, additional maintenance to the NMHC and NO2 analyzer interrupted each analyzer for 69 and 92 hours, respectively. Additional downtime was also required for the wind speed and wind direction sensor. Following notification from AEP auditors that the Barge Landing wind speed and wind direction sensor was not within AMD siting criteria, WBEA replaced the 10-meter wind speed and wind direction sensor at Barge Landing AMS with a wind speed and wind direction sensor at the 20-meter elevation.	N/A

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
28-Sep-21	383882	September	Wapasu	The total hydrocarbons analyzer at Wapasu operated less than 90% of September due to station temperature fluctuations.	Following a station power outage, the breaker which controls the HVAC unit became tripped. Elevated station temperatures were identified on September 5th, and a WBEA Technician responded the same day. However, following the reset of the breaker, the HVAC unit continued to be non-functional. A plan was developed to have a HVAC contractor assess the unit, and a site visit on September 15 revealed a failed compressor. The failed component was replaced, and normal HVAC system operations resumed. From September 5th through 15th, the fluctuating internal station temperature affected the THC analyzer response, resulting in periodic data loss.	The failed HVAC component was replaced on September 15.
8-Oct-21	384384	September	Bertha Ganter Fort McKay	Monthly Routine Multi-point Calibration was not Completed for Ozone (O3) Analyzer at Bertha Ganter - Fort McKay Air Monitoring Station (AMS) in September 2021.	On October 7, 2021, during a compilation of network calibration summaries, it was identified that the monthly O3 calibration was not completed in September 2021, with the last calibration having been completed on August 4, 2021. The WBEA Technician responded promptly and conducted a monthly multi-point calibration the same day.	The analyzer was calibrated as soon as becoming aware of the non-compliance.
22-Oct-21	384876	October	Firebag	The wind speed and direction sensor operated less than 90% of July due to a cup becoming disconnected.	During daily system checks on October 6, a WBEA Technician observed the wind speed signal to be inconsistent with the normal operations of the sensor. A response plan was initiated, and a site visit was planned for the earliest opportunity on October 13. During the site visit, a WBEA Technician visually inspected the sensor and identified that the cup assembly was disconnected from the wind speed sensor due to loosened cup arms.	The Technician replaced the sensor and completed a subsequent calibration of the system to verify the sensor performance.
12-Nov-21	385511	October	Conklin	The THC/NMHC/CH4 analyzer at Conklin air monitoring station (AMS) operated less than 90% of October 2021 due to collapsed baseline.	This instrument is a semi-continuous gas chromatograph which requires the CH4 and NMHC peaks to remain within the data capture windows. Beginning on October 7th, these peaks shifted outside of the optimal data capture windows, therefore, the captured data was invalidated. This shift may occur during routine instrument operations or may be due to an issue with the instrument. Field maintenance conducted on October 7th did not resolve the issue, therefore, the analyzer was replaced, and the zero-air generator (ZAG) was replaced on October 9th and 10th. After the analyzer was calibrated to verify its performance, normal operations resumed at 13:00 MST on October 10th.	This incident was reviewed at a technical workshop to provide training to staff on how to better identify instances of zero air generator failure.
2-Dec-21	386068	Novmeber	Fort McKay South	The THC/NMHC/CH4 analyzer at Fort McKay South air monitoring station (AMS) operated less than 90% of November 2021 due to collapsed baseline.	This instrument is a semi-continuous gas chromatograph which requires the CH ₄ and NMHC peaks to remain within the data capture windows. Beginning on November 7 th , these peaks shifted outside of the optimal data capture windows, therefore, the captured data was invalidated. This shift may occur during routine instrument operations or may be due to an issue with the instrument. Field maintenance conducted on November 12 th did not resolve the issue, therefore, the analyzer was replaced on November 12 th and left in stabilization mode until next day. After the analyzer was calibrated to verify its performance, normal operations resumed at 15:00 MST on November 13 th . The data validation procedure for the November reporting period, conducted in December, determined that 150 hours of data was invalidated for this reporting period.	This incident was reviewed at a technical workshop to provide training to staff on how to better identify instances of unstable/shift in baseline response.
20-Jan-22	387235	December 2021 and January 2022	Stony Mountain	All gaseous air quality analyzers at Stony Mountain air monitoring station (AMS) operated less than 90% for December 2021 and January 2022 due to a broken sample glass manifold.	The glass sample manifold assembly was discovered to be broken during a routine calibration visit on January 11, 2022, preventing the analyzers from sampling ambient air. The manifold assembly was replaced on January 12, 2022. During the data validation process, a review of sample manifold diagnostics indicates that the break occurred on December 25, 2022. Data for all gaseous analyzers including CO, CO ₂ , NO ₂ , O ₃ , SO ₂ , THC/NMHC/CH4, and TRS at Stony Mountain AMS was invalidated for 170 hours for December 2021 and ≥ 280 hours for January 2022.	This incident was reviewed at a technical workshop to provide training to staff on how to better identify instances of change in manifold pressure.

Date Reported	AEP Reference Number	Reporting Period	Location	Brief Description	Issue	Remedial Action
20-Jan-22	387236	December	Lower Camp	The THC/NMHC/CH4 analyzer at Lower Camp air monitoring station (AMS) operated less than 90% of December 2021 due to station power outages and hydrogen generator failure.	<p>There were two issues associated with the operation of the NMHC analyzer, resulting in 82 hours of invalid data:</p> <ul style="list-style-type: none"> -Multiple power outages at the station on December 2 through 4 affected the normal operations of the THC/NMHC/CH4 analyzer for 14 hours. -Following the power outage on December 3, the hydrogen generator failed to recover. Performance issues with the hydrogen generator (support equipment to the analyzer) were identified on December 6 and were resolved that day. Following the maintenance of the hydrogen generator, the analyzer was calibrated to verify its performance. Failure of the hydrogen generator affected the normal operations of the THC/NMHC/CH4 analyzer for 68 hours. 	<p>This incident was reviewed at a technical workshop to provide training to staff on how to better identify instances of unstable/shift in baseline response.</p>
20-Jan-22	387238	December	Mannix	The 90-meter elevation WS/WD/VWS at Mannix AMS operated less than 90% for December 2021 due to ice fog interfering.	Multiple instances of flat-line periods in the sensors' output signal were attributed to ice fog interfering with the sonic sensors, and data from those events were invalidated. During the data validation process, WS/WD/VWS data at Mannix AMS was invalidated for a total of 90 hours.	n/a
20-Jan-22	387239	December 2021 and January 2022	Mackay River	The precipitation collector at Mackay River air monitoring station (AMS) operated less than 90% for December 2021 and January 2022 because of overaccumulation of snow.	Overaccumulation of snow and resultant ice build-up inside the precipitation collector resulted in the recording of inaccurate precipitation values. The precipitation collector bucket was thawed and emptied on January 21, 2022, with normal operations resuming at 13:50 MST. During the data validation process, a comparison of precipitation collector data with a nearby site was used to determine that the sensor began to read inaccurate readings on December 15, 2021. The Precipitation Collector data at MacKay River AMS was invalidated for 408 hours for December 2021 and 493 hours for January 2022.	<p>This incident was reviewed at a technical workshop to provide training to staff on how to better identify instances of inaccurate reading events.</p>
24-Jan-22	387335	December	Meg Energy	The H2S analyzer at Meg Energy air monitoring station (AMS) operated less than 90% of December due to station temperature fluctuation and power outages.	<p>There were three issues associated with the operation of the H2S analyzer, resulting in 96 hours of invalid data:</p> <ul style="list-style-type: none"> -On December 5 through 16, the Jackfish 1 AMS station temperature dropped, affecting the H2S analyzer for 54 hours. -A power interruption on December 24 and 25 resulted in 16 hours of downtime for the H2S analyzer. Following the recovery of the power at the station, the HVAC unit failed to maintain a stable operating temperature within the air monitoring station. Station temperature fluctuations from December 24 and 25 resulted in an additional 23 hours of downtime for the H2S analyzer. -The daily QA check on December 25 through 27 failed to meet operational criteria due to an error in the data logger program. Maintenance was conducted on December 27 to reinitiate the daily QA check, causing a further 3 hours of invalid data. 	n/a
28-Oct-22	406184	June 2021 to October 2022	Buffalo Viewpoint	The wind speed and wind direction (WS/WD) sensor at Buffalo Viewpoint AMS operated less than 90% for the month of June 2021 through to the month of October 2022, due to wind direction sensor misalignment.	On October 6, during the annual audit of the WS/WD sensor, it was found that the sensor was not aligned with each set point used to calibrate the instrument. A new, functioning sensor was installed that day. The previous annual audit, completed on June 3, 2021, had concluded that the instrument was in excellent working condition (average correction factor 1.003) and the sensor had no other maintenance conducted since that audit. Further investigation of the faulty sensor determined the internal components were not moving in unison, as designed, due to a loose set screw, which led to inaccurate wind direction readings. The misalignment was non-uniform, ranging from 15 to 23 degrees, depending on the conditions, and was undetectable during monthly field visual checks and data validation.	<p>A new, functioning wind direction sensor was installed during the annual audit in 2022.</p>
