

**WOOD BUFFALO ENVIRONMENTAL ASSOCIATION  
MONTHLY AMBIENT AIR QUALITY MONITORING REPORT  
FEBRUARY 2023  
REPORT HISTORY**

Original report release date: March 31, 2023

Revised report release date: April 28, 2023

Revised report release date: June 2, 2023

Revised report release date: August 30, 2023

**Revision 1 – Resubmission of Air Monitoring Station Monthly Summary Report.**

The monthly Air Monitoring Stations (AMS) summary reports for February were inaccurately created for Bertha Ganter AMS, Lower Camp AMS, and Patricia McInnes AMS.

The Air Monitoring Station summary reports have been updated from the original version, and they were re-submitted to the Electronic Transfer System (ETS) on April 28, 2023.

**Revision 2 – Resubmission of Air Monitoring Station Monthly Summary Report.**

During the daily system check of the wind speed and wind direction (WS/WD) data, it was found that the sensor at Firebag Air Monitoring Station (AMS) data did not follow the same pattern with near by stations. A site inspection of the WS/WD tower showed that one set of bolts which secure the tower to the station were missing, resulting in the misalignment of the tower orientation.

As a result, the WS/WD data from Firebag AMS was revised and flagged properly, and the sensor operated less than 90% for the month of February through May (reference number 412838). The Air Monitoring Station summary reports have been updated from the original version, and they were re-submitted to the Electronic Transfer System (ETS) on June 2, 2023.

**Revision 3 – Submission of H<sub>2</sub>S data and Revision of TRS data at Patricia McInnes.**

The Patricia McInnes air monitoring station (AMS06) collected H<sub>2</sub>S data from January 3, 2023, to June 12, 2023, but it was reported as TRS. On August 30, 2023, the data was resubmitted as H<sub>2</sub>S to the Electronic Transfer System (ETS) and the TRS data was revised. The monthly report cover letter, station summary, network summary, and calibration report contained within have been revised to reflect the change.

**RE: Monthly Ambient Air Quality Monitoring Report February 2023 – Revision 02  
Wood Buffalo Environmental Association**

---

Enclosed is the February 2023 Ambient Air Quality Monitoring Report for the continuous ambient air quality monitoring stations of the Wood Buffalo Environmental Association (WBEA) regional air quality monitoring network.

The continuous ambient air quality monitoring network stations are:

|                                    |                                 |
|------------------------------------|---------------------------------|
| AMS01 - Bertha Ganter - Fort McKay | AMS18 - Stony Mountain          |
| AMS02 - Mildred Lake               | AMS19 - Firebag                 |
| AMS03 - Lower Camp (Meteorology)   | AMS20 - MacKay River            |
| AMS04 - Buffalo Viewpoint          | AMS21 - Conklin                 |
| AMS05 - Mannix                     | AMS22 - Janvier                 |
| AMS06 - Patricia McInnes           | AMS23 - Fort Hills              |
| AMS07 - Athabasca Valley           | AMS25 - Waskōw ohci Pimâtisiwin |
| AMS08 - Fort Chipewyan             | AMS26 - Christina Lake          |
| AMS09 - Barge Landing              | AMS27 - Jackfish 2/3            |
| AMS11 - Lower Camp (Air Quality)   | AMS29 - Surmont 2               |
| AMS13 - Fort McKay South           | AMS30 - Ells River              |
| AMS14 - Anzac                      | AMS506 – Jackfish 1             |
| AMS17 - Wapasu                     | AMS508 - Kirby North            |

The WBEA submits this report on behalf of its members and for some members to satisfy the requirements contained in their EPEA Approvals (as amended):

Figure 1: Map of WBEA Continuous Monitoring Network

The following operational notes are provided as per the Air Monitoring Directive requirements.

## 1.0 Concentrations in Excess of Alberta Ambient Air Quality Guidelines and Objectives

There were no ambient concentrations in excess of the Alberta Ambient Air Quality Objectives or Guidelines (AAAQO/AAAQG) as indicated in the Air Monitoring Directive Section RC 5-F for CO, H<sub>2</sub>S, NH<sub>3</sub>, NO<sub>2</sub>, O<sub>3</sub>, SO<sub>2</sub>, and TRS.

There was one ground-level concentration in excess of the 1-hour H<sub>2</sub>S objective reported to AEPA; following data validation and processing this exceedance was not confirmed.

There were two ambient ground level concentrations in excess of the 1-hour PM<sub>2.5</sub> guideline reported to AEPA; following data validation and processing these exceedances were confirmed.

| Site       | Parameter         | Date / Time    | Reference | Period | Reported | Final | Status* |
|------------|-------------------|----------------|-----------|--------|----------|-------|---------|
| Anzac      | PM <sub>2.5</sub> | 19Feb23, 01:00 | 409784    | 1-hr   | 214      | 214.3 | exc     |
| Anzac      | PM <sub>2.5</sub> | 19Feb23, 02:00 | 409784    | 1-hr   | 207      | 207.4 | exc     |
| Lower Camp | H <sub>2</sub> S  | 25Feb23, 20:00 | 409943    | 1-hr   | 10       | 9.4   | nae     |

\*status legend:

- late    exceedance, raw values were not found to be in exceedance in real time, and/or were not reported, but final values were found to be an exceedance after data processing.
- exc    exceedance, raw values reported in real time were confirmed to be in exceedance after data processing.
- nae    not an exceedance, raw values reported in real time were found not in exceedance after data processing.
- ret    retracted, reported exceedance was found to be not an exceedance after investigation of measurement system status and/or validation of raw data in conjunction with all associated measurement parameters.

## 2.0 Data Processing and Validation

Concentrations reported in near real-time were raw values. The final values were determined after processing data for reporting. For all parameters, except PM<sub>2.5</sub>, the final 5-minute data values were determined by subtracting the daily zero responses, interpolated to the time of each raw 5-minute value, from the raw 5-minute data values. The PM<sub>2.5</sub> analyzers do not have the capability of performing zero's, therefore, the raw 5-minute values are validated through a comparison with associated parameters at the same, or a nearby, AMS. The final 5-minute data values were then rounded to one decimal place greater than the reporting precision indicated in the Air Monitoring Directive (AMD). The final 1-hour data values were calculated from final 5-minute data values and then rounded to reporting precision. The final 24-hour data values were calculated from final 1-hour values.

After data processing and validation, NO<sub>2</sub> concentrations were re-calculated from baseline-corrected NO<sub>x</sub> and NO concentrations. Specifically, the NO concentration was subtracted from the NO<sub>x</sub> concentration to determine the NO<sub>2</sub> concentration.

## 2.1 Revisions to ETS Electronic Transfer System – Data and Monthly Reports

There were no revisions to historical data stored at the Electronic Transfer System with this monthly report.

## 3.0 Operational Status

### 3.1 Continuous Monitoring

In January 2023, there were three instances that resulted in monitoring instruments operating less than 90% of the time.

1. The THC, NMHC, and CH<sub>4</sub> analyzer at the Ells River AMS operated for less than 90% of February 2023, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AEPA) on February 27, 2023 (reference number 409974).

This instrument is a semi-continuous gas chromatograph that requires the CH<sub>4</sub> and NMHC peaks to remain within the data capture windows. In early February, these peaks shifted outside of the optimal data capture windows, and as a result, the baseline shifted outside of the normal range. The WBEA performed maintenance to rectify the issue, including a column bakeout to remove impurities, however, the analyzer did not return to normal operation. The analyzer was replaced, and normal operation resumed on February 12, 2023. Data for the incident period was invalidated for a total of 90 hours of downtime.

2. The precipitation collector at the Bertha Ganter – Fort McKay air monitoring station (AMS) operated for less than 90% of February 2023, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AEPA) on March 27, 2023 (reference number 411026).

On February 23, a WBEA Field Technician identified that the data transfer program had stopped writing files to the data logger on February 20. The data logger was reset, and data transfer resumed on February 23 at 10:00 MST. Data for the incident period of February 20 through 23 was invalidated, resulting in a total of 82 hours of downtime.

### 3.2 Intermittent Monitoring

The results for time-integrated sampling of precipitation, PAH, VOC, ECOC, PM<sub>2.5</sub>, and PM<sub>10</sub> will be submitted in the 2023 Annual Report.

### 3.3 General Network Notes

The Ammonia (NH<sub>3</sub>) analyzer currently operates on a 0 to 2500 ppb operating range with a detection level of 5 ppb in the WBEA network. In data processing, values less than five ppb have been considered below detection levels and are reported as zero.

Total hydrocarbon (THC), non-methane hydrocarbon (NMHC), and methane (CH<sub>4</sub>) measurements are collected at some air monitoring stations in the WBEA network using the Thermo Environmental model 55i direct CH<sub>4</sub>/NMHC analyzer. This analyzer uses a Gas Chromatography (GC) based system, which resets

the baseline value at the start of every run. This may cause the ambient background to indicate a response below the expected 1.8 ppm background level. When all measurable criteria indicate valid data during the QAQC and validation process, the data is reported without any additional flags. However, a response below the expected 1.8 ppm triggers an investigation of the analyzer to determine if there is an issue.

Monitoring notes, including changes to monitoring locations, methods, or equipment, and any reporting or monitoring irregularities, for the continuous monitoring stations, are provided on a station-by-station basis. Notes of each interrupted event are provided in chronological order, and meteorological parameters are mentioned last.

### ***Station 1, Bertha Ganter – Fort McKay***

The NH<sub>3</sub> analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily spans and routine monthly multipoint calibrations. Additional time is required for stabilization after exposure to high concentrations of NH<sub>3</sub> gas, this is an inherent behavior in the NH<sub>3</sub> analyzer operations due to the properties of the NH<sub>3</sub> gas. Data for 1 hour following the daily spans have been reported as invalid for a total of 28 hours this month.

Station power failure on February 10 affected the normal operations of all analyzers for 2 hours.

Stabilization of the CO analyzer post power failure on February 10 and 11 resulted in 7 hours of invalid data.

Cleaning of the sample manifold on February 16 interrupted the normal operations of all gaseous analyzers, except for the NH<sub>3</sub> analyzer, for 1 hour.

Unstable operations due to excessive baseline noise in the output signal of the NH<sub>3</sub> analyzer on February 15 and 24 resulted in 2 hours of invalid data.

Stabilization post replacement of the NH<sub>3</sub> analyzer on February 16 and 17 resulted in 14 hours of invalid data.

Unstable operations due to flatline in the output signal of the SO<sub>2</sub> analyzer on February 22 and 23 resulted in 21 hours of invalid data. Subsequent maintenance to reset the SO<sub>2</sub> analyzer on February 23 resulted in an additional 1 hour of downtime.

Maintenance to verify the daily QA check on February 23 interrupted the normal operations of the O<sub>3</sub> analyzer for 1 hour.

Maintenance to empty the precipitation collector bucket on February 8 resulted in 1 hour of invalid data.

Failure to record data of the precipitation collector on February 10 and 20 to 23 resulted in 83 hours of invalid data.

The surface leaf wetness sensor operated out-of-range on February 11 resulting in 2 hours of invalid data.

A flatline in the output signal of the temperature sensor at the 10-meter elevation on February 13 resulted in 1 hour of invalid data.

A flatline in the output signal of the wind sensor on February 15 resulted in 2 hours of invalid data.

The daily span check of all gaseous analyzers was outside the 10% AMD criteria on February 23 due to an interruption in the station calibrator configuration.

### ***Station 2, Mildred Lake***

Maintenance to bring the tower down on February 8 interrupted the normal operations of the wind sensor for 2 hours.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 4 hours of invalid data.

### ***Station 3, Lower Camp – Meteorology***

Failure to record data of all parameters throughout the month resulted in 45 hours of invalid data.

A flatline in the output signal of the wind sensor at 45-meter elevation on February 13 resulted in 2 hours of invalid data.

A flatline in the output signal of the wind sensor at 100-meter elevation on February 13 resulted in 3 hours of invalid data.

Intermittent flatlines in the output signal of the wind sensor at 163-meter throughout the month resulted in 16 hours of invalid data.

A flatline in the output signal of the temperature sensor at 20-meter elevation on February 21 and 25 resulted in 7 hours of invalid data.

A flatline in the output signal of the relative humidity and temperature sensor at 20-meter elevation on February 27 resulted in 5 hours of invalid data.

### ***Station 4, Buffalo Viewpoint***

Analyzer failure due to non-responsive output signal of the SO<sub>2</sub> analyzer from February 15 to 16 resulted in 22 hours of invalid data.

Maintenance to reboot the SO<sub>2</sub> analyzer on February 16 resulted in one hour of down time.

Maintenance to replace the support gas cylinder of the THC/NMHC/CH<sub>4</sub> analyzer on February 16 resulted in 2 hours of downtime.

Maintenance to clean the reaction cell on February 13, and the stabilization period before routine calibration on February 14 affected the normal operation of the NO<sub>2</sub> analyzer for 17 hours.

A flatline in the output signal of the wind sensor on February 13 and 14 resulted in 17 hours of down time.

### ***Station 5, Mannix***

A flatline in the output signal of the wind sensor at 45-meter throughout the month resulted in 4 hours of invalid data.

A flatline in the output signal of the wind sensor at 75-meter throughout the month resulted in 6 hours of invalid data.

A flatline in the output signal of the wind sensor at 90-meter throughout the month resulted in 3 hours of invalid data.

Relative humidity and temperatures can affect the performance of the SO<sub>x</sub> scrubbers in the H<sub>2</sub>S analyzer. During these events, the sulfur concentrations take a longer period to stabilize during the daily span checks. Therefore, the H<sub>2</sub>S span was outside of the 10% AMD criteria on February 2 and 22.

### ***Station 6, Patricia McInnes***

The NH<sub>3</sub> analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily spans and routine monthly multipoint calibrations. NH<sub>3</sub> analyzers require additional time for stabilization after being exposed to high concentrations, this is due to the physical properties of the NH<sub>3</sub> gas. Data for 1 to 2 hours following each daily span has been reported as invalid for a total of 41 hours this month.

Cleaning of the sample manifold on February 2 interrupted the normal operations of the H<sub>2</sub>S, O<sub>3</sub>, SO<sub>2</sub>, and THC/NMHC/CH<sub>4</sub> analyzers for 2 hours.

Unstable operations due to excessive baseline drift in the output signal of the analyzer THC/NMHC/CH<sub>4</sub> on February 23 to 25 resulted in 61 hours of invalid data.

Maintenance to replace the sample pump on February 25 interrupted the normal operations of the THC/NMHC/CH<sub>4</sub> analyzer for 6 hours.

The TRS analyzer was not in service for 672 hours in February.

A flatline in the output signal of the wind sensor on February 13 to 15 resulted in 52 hours of invalid data.

### ***Station 7, Athabasca Valley***

Cleaning of the sample manifold on February 8 interrupted the normal operations of the NO<sub>2</sub>, SO<sub>2</sub>, THC/NMHC/CH<sub>4</sub>, and TRS analyzers for 1 hour.

### ***Station 8, Fort Chipewyan***

Maintenance to verify the daily QA check on February 3 interrupted the normal operations of the CO and CO<sub>2</sub> analyzers for 3 hours.

Analyzer failure due to a non-responsive SO<sub>2</sub> instrument on February 8 resulted in 9 hours of invalid data.

An internal audit on February 28 interrupted the normal operations of NO<sub>2</sub>, SO<sub>2</sub>, and TRS analyzers for 2 to 3 hours.

#### ***Station 9, Barge Landing***

Station power failure on February 10 affected the normal operations of all analyzers for 4 to 5 hours.

A flatline in the output signal of the wind sensor on February 22 resulted in 1 hour of invalid data.

#### ***Station 11, Lower Camp***

Cleaning of the sample manifold on February 8 interrupted the normal operations of the SO<sub>2</sub> and THC/NMHC/CH<sub>4</sub> analyzers for 2 hours.

A flatline in the output signal of the wind sensor on February 23 and 28 resulted in 3 hours of invalid data.

#### ***Station 13, Fort McKay South***

Station power failure on February 10 affected the normal operations of all analyzers for 1 to 2 hours.

Maintenance to replace the support gas cylinder of the THC/NMHC/CH<sub>4</sub> analyzer on February 16 resulted in 2 hours of downtime.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 4 hours of invalid data.

Automated daily zero-response checks of the O<sub>3</sub> analyzer did not meet WBEA's QC acceptance criteria for the month of February. Therefore, the calibrator zeros from the February, and March multi-point calibrations were used to validate the analyzer baseline response.

#### ***Station 14, Anzac***

Unstable operations due to excessive baseline drift in the output signal of the O<sub>3</sub> analyzer on February 10 and 20 resulted in 3 hours of invalid data.

A flatline in the output signal of the wind sensor on February 3, 4, and 11 resulted in 8 hours of invalid data.

The surface leaf wetness sensor operated out-of-range on February 13 resulting in 1 hour of invalid data.

#### ***Station 17, Wapasu***

Cleaning of the sample manifold on February 23 interrupted the normal operations of the H<sub>2</sub>S, O<sub>3</sub>, SO<sub>2</sub>, and THC analyzers for 1 hour.

A flatline in the output signal of the wind on February 1 and 28 resulted in 2 hours of invalid data.

#### ***Station 18, Stony Mountain***

Station operator activities on February 3 affected the normal operations of the SO<sub>2</sub> analyzer for 2 hours.

Maintenance to replace the support gas cylinder of the THC/NMHC/CH<sub>4</sub> analyzer on February 3 resulted in 2 hours of downtime.

Station operator activities on February 8 affected the normal operations of the TRS analyzer for 1 hour.

Cleaning of the sample manifold on February 22 interrupted the normal operations of the CO, CO<sub>2</sub>, O<sub>3</sub>, SO<sub>2</sub>, THC/NMHC/CH<sub>4</sub>, and TRS analyzers for 1 hour.

A flatline in the output signal of the wind on February 14 resulted in 1 hour of invalid data.

### ***Station 19, Firebag***

Unstable Operations of the SO<sub>2</sub> and THC analyzer on Feb 7 and 8 due to the sample line being disconnected to the manifold resulting on a total of 19 hours of downtime.

Station operator activities on February 8 affected the normal operations of the wind sensor for 2 hours.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 6 hours of invalid data.

Unstable operations due to the misaligned tower that affected the wind sensor readings throughout the month for 79 hours.

### ***Station 20, MacKay River***

Cleaning of the sample manifold on February 2 interrupted the normal operations of the H<sub>2</sub>S, SO<sub>2</sub>, THC and analyzers for 1 hour.

Maintenance to reset the logger and the modem on February 2 interrupted the normal operation of the H<sub>2</sub>S, SO<sub>2</sub>, THC and analyzers for 2 hours.

Maintenance to reset the logger and the modem on February 2 interrupted the normal operation of all meteorological sensors for 2 hours.

Maintenance to bring the tower down on February 14 interrupted the normal operations of the wind sensor for 1 hour.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 30 hours of invalid data.

Relative humidity and temperatures can affect the performance of the SO<sub>x</sub> scrubbers in the analyzer. During these events, the sulfur concentrations take a longer period to stabilize during the daily span checks. Therefore, the H<sub>2</sub>S span was outside of the 10% AMD criteria on February 2, 22, and 23.

### ***Station 21, Conklin***

Cleaning of the sample manifold on February 3 interrupted the normal operations of the NO<sub>2</sub>, SO<sub>2</sub>, THC/NMHC/CH<sub>4</sub>, and TRS analyzers for 2 hours.

Station operator activities on February 8 affected the normal operations of the wind sensor for 1 hour.

A flatline in the output signal of the wind sensor on February 14 resulted in 1 hour of invalid data.

Relative humidity and temperatures can affect the performance of the SO<sub>x</sub> scrubbers in the TRS analyzer. During these events, the sulfur concentrations take a longer period to stabilize during the daily span checks. Therefore, the TRS span was outside of the 10% AMD criteria for multiple days throughout the month of February.

Automated daily zero-response checks of the O<sub>3</sub> analyzer did not meet WBEA's QC acceptance criteria for the month of February. Therefore, the calibrator zeros from the January, February, and March multi-point calibrations were used to validate the analyzer baseline response.

#### ***Station 22, Janvier***

Cleaning of the sample manifold on February 24 interrupted the normal operations of the NO<sub>2</sub>, O<sub>3</sub>, SO<sub>2</sub>, and THC/NMHC/CH<sub>4</sub> analyzers for 1 hour.

A flatline in the output signal of the wind sensor on February 11 and 23 resulted in 2 hours of invalid data.

#### ***Station 23, Fort Hills***

Maintenance to replace the sample pump on February 14 interrupted the normal operations of the TRS analyzer for 6 hours.

Maintenance to reinitiate the daily QA check on February 24 interrupted the normal operations of the SO<sub>2</sub>, THC/NMHC/CH<sub>4</sub>, and TRS analyzer for 1 to 2 hours.

Unstable operations due to daily spans outside criteria on February 22 and 23 affected the normal operation of the NO<sub>2</sub> analyzer for 30 hours.

Maintenance to replace the NO<sub>2</sub> analyzer, and verification of the daily QA check on February 24 affected the normal operation of the instrument for 21 hours.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 6 hours of invalid data.

#### ***Station 25, Waskōw ohci Pimâtisiwin***

Station power cut-off since January 27 affected the normal operations of all analyzers and sensors on February for 672 hours.

#### ***Station 26, Christina Lake***

Cleaning of the sample manifold on February 15 interrupted the normal operations of the NO<sub>2</sub> and SO<sub>2</sub> analyzers for 2 hours.

Maintenance to reinitiate the daily QA check on February 16 interrupted the normal operations of the H<sub>2</sub>S analyzer for 2 hours.

Failure to record data of the NO<sub>2</sub> analyzer on February 27 resulted in 1 hour of invalid data.  
Station operator activities on February 15 affected the normal operations of the wind sensor for 2 hours.

The daily span check for the H<sub>2</sub>S analyzer was outside the 10% AMD criteria on February 16 due to an interruption in the station calibrator configuration.

### ***Station 27, Jackfish 2/3***

Failure to record data of all parameters on February 5 and 13 resulted in 2 hours of invalid data.

Cleaning of the sample manifold on February 14 interrupted the normal operations of the H<sub>2</sub>S and NO<sub>2</sub> analyzers for 1 hour.

Station operator activities on February 14 affected the normal operations of the wind sensor for 1 hour.

### ***Station 29, Surmont 2***

Maintenance to replace the station calibrator and verify the QA check interrupted the normal operations of the NO<sub>2</sub> analyzer for 3 hours.

Station operator activities on February 17 affected the normal operations of the wind sensor for 2 hours.

A flatline in the output signal of the wind sensor on February 23 and 28 resulted in 6 hours of invalid data.

The daily span check for the NO<sub>2</sub> analyzer was outside the 10% AMD criteria on February 18 due to an interruption in the station calibrator configuration.

### ***Station 30, Ells River***

Station power failure on February 10 affected the normal operations of all analyzers, and PM<sub>2.5</sub>, for 1 to 2 hours.

Unstable operations due to excessive baseline drift in the output signal of the THC/NMHC/CH<sub>4</sub> analyzer on February 8 through 11 resulted in 64 hours of invalid data.

Maintenance to condition the column and replace the analyzer on February 12 interrupted the normal operations of the THC/NMHC/CH<sub>4</sub> analyzer for 26 hours.

An internal audit on February 14 interrupted the normal operations of all air quality analyzers for 1 to 4 hours.

Cleaning of the sample manifold on February 15 interrupted the normal operations of the NO<sub>2</sub>, THC/NMHC/CH<sub>4</sub>, and TRS analyzers for 2 hours.

Maintenance to bring the tower down on February 15 interrupted the normal operations of the wind sensor for 2 hours.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 8 hours of invalid data.

### ***Station 506, Jackfish 1***

An internal audit on February 8 interrupted the normal operations of all air quality analyzers for 3 to 4 hours.

Maintenance to re-fill the SO<sub>2</sub> scrubber hydrator, and a subsequent multi-point verification check on February 13 interrupted the normal operations of the H<sub>2</sub>S analyzer for 5 hours.

Maintenance to verify the daily QA check on February 21 interrupted the normal operations of the H<sub>2</sub>S analyzer for 2 hours.

Maintenance to re-fill the SO<sub>2</sub> scrubber hydrator on February 22 interrupted the normal operations of the H<sub>2</sub>S analyzer for 3 hours.

Analyzer failure due to a non-responsive H<sub>2</sub>S analyzer from February 22 to 24 resulted in 45 hours of invalid data.

Maintenance to replace the H<sub>2</sub>S analyzer on February 24 resulted in 1 hour of invalid data.

A flatline in the output signal of the wind sensor on February 6 resulted in 10 hours of invalid data.

Relative humidity and temperatures can affect the performance of the SO<sub>x</sub> scrubbers in the analyzer. During these events, the sulfur concentrations take a longer period to stabilize during the daily span checks. Therefore, the H<sub>2</sub>S span was outside of the 10% AMD criteria for multiple days throughout February.

### ***Station 508, Kirby North***

Maintenance to complete a multi-point verification check of the THC analyzer on February 2 resulted in 7 hours of invalid data.

Unstable operations due to the inconsistent response of the H<sub>2</sub>S analyzer on February 13 and 14 resulted in 32 hours of invalid data.

Maintenance to re-fill the SO<sub>2</sub> scrubber hydrator, and a subsequent multi-point verification check on February 14 and 15 interrupted the normal operations of the H<sub>2</sub>S analyzer for 23 hours.

Station operator activities on February 2 affected the normal operations of the wind sensor for 6 hours.

A flatline in the output signal of the wind sensor on February 14 resulted in 3 hours of invalid data.

If additional information is required, please contact either Sanjay Prasad at (780) 799-8216 or the Wood Buffalo Environmental Association at (780) 799-4420.

Sincerely,

**Wood Buffalo Environmental Association**

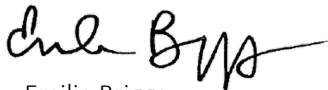

The representative of the Person Responsible for this monitoring program is Emilie Briggs, Operations Manager, WBEA.

Level one (L1) data review was completed by the Field Technicians responsible for each respective air monitoring station. Level two (L2) data validation, report preparation, and submission were completed by Asad Hidayat and Karina Fenwick of WBEA. The WBEA has retained the services of Whiteley Enterprises to conduct Level three (L3) review on its behalf. Contact information for WBEA staff is included below.

Asad Hidayat, Data Technician  
Wood Buffalo Environmental Association
