The following operational notes are provided as per the Air Monitoring Directive requirements.

1.0 Concentrations in Excess of Alberta Ambient Air Quality Guidelines and Objectives

There were no ambient concentrations in excess of the Alberta Ambient Air Quality Objectives or Guidelines (AAAQO/AAAQG) as indicated in the Air Monitoring Directive Section RC 15-F for CO, NH₃, NO₂, O₃, SO₂ and TRS.

There was one ground-level concentrations in excess of the 1-hour H₂S objective reported to AEPA; following data validation and processing, the exceedance was not confirmed.

There were three ambient ground-level concentrations in excess of the 1-hour PM_{2.5} guideline reported to AEPA; following data validation and processing, the exceedances were confirmed.

- late exceedance, raw values were not found to be in exceedance in real time, and/or were not reported, but final values were found to be an exceedance after data processing.
- exc exceedance, raw values reported in real time were confirmed to be in exceedance after data processing.
- nae not an exceedance, raw values reported in real time were found not in exceedance after data processing.
- ret retracted, reported exceedance was found to be not an exceedance after investigation of measurement system status and/or validation of raw data in conjunction with all associated measurement parameters.

2.0 Data Processing and Validation

Concentrations reported in near real-time are raw values. The final values are determined after processing data for reporting. For all parameters, except PM_{2.5}, the final 5-minute data values are determined by subtracting the daily zero responses, interpolated to the time of each raw 5-minute value, from the raw 5-minute data values. The PM_{2.5} analyzers do not have the capability of performing zero's, therefore, the raw 5-minute values are validated through a comparison with associated parameters at the same, or a nearby, AMS. The final 5-minute data values are then rounded to one decimal place greater than the reporting precision indicated in the Air Monitoring Directive (AMD). The final 1-hour data values are calculated from final 5-minute data values and then rounded to reporting precision. The final 24-hour data values are calculated from the final 1-hour values.

After data processing and validation, NO₂ concentrations are re-calculated from baseline-corrected NO_x and NO concentrations. Specifically, the NO concentration is subtracted from the NO_x concentration to determine the NO₂ concentration.

2.1 Revisions to ETS Electronic Transfer System – Data and Monthly Reports

There were no revisions to historical data stored in the Electronic Transfer System with this monthly report.

3.0 Operational Status

3.1 Continuous Monitoring

In February 2025, there were 7 instances that resulted in monitoring instruments operating less than 90% of the time.

Station	Parameter	Details
Fort Chipewyan	Total Reduced Sulphur (TRS)	The TRS analyzer at Fort Chipewyan AMS operated less than 90% of January and February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on February 21, 2025 (reference number 437908).
		On January 27, a power failure at the station disrupted the normal operation of all air quality analyzers for 3 hours. The power failure caused a malfunction of the TRS converter, affecting the accuracy of the daily span results. A site visit was scheduled for February 3, the best available time due to the remote location. During the visit the TRS converter was replaced, and its performance was verified. A period of stabilization and adjustment was needed to ensure optimal performance of the analyzer. Normal operation was restored on February 21. During the data validation process, 96 hours of data from January were invalidated, resulting in an operational time of 86.7%. The validation of February data is in progress.
Stony Mountain	Precipitation Collector (PC)	The precipitation gauge at the Stony Mountain AMS operated less than 90% of February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on February 21, 2025 (reference number 437930).
		During the weekly preparation of the time-integrated precipitation sample from Stony Mountain AMS, it was noted that the sample volume did not compare well with the precipitation data from the gauge that is also located at the Stony Mountain AMS, or with data from other precipitation gauges in the WBEA network. It was determined that the precipitation gauge at Stony Mountain was over-reporting precipitation volumes from approximately February 10-February 21 due to an overfilled collection bucket and snow-covered shield. The issue was resolved by emptying the bucket; the standard maintenance that is completed monthly. Data for the period was invalidated, resulting in an operational time of approximately 70% for February.
Fort Hills	Total Hydrocarbon (THC), Non-methane Hydrocarbon (NMHC) & Methan (CH ₄)	The total hydrocarbon (THC)/non-methane hydrocarbon (NMHC)/methane (CH ₄) analyzer at the Fort Hills AMS operated less than 90% of February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on March 11, 2025 (reference number 438501).
		During the daily system check on February 18, the baseline data showed evidence of an instrument issue, therefore, a calibration was performed, which subsequently failed. As a result, the analyzer, zero air generator, and pump were replaced. However, the replacement analyzer also malfunctioned, and additional maintenance was required. Ultimately, on February 25, the analyzer was replaced again, its performance was verified, and normal operation was restored. During the data validation process, 147 hours were invalidated, resulting in an operational time of 82.6%.
Wapasu	Wind Speed (WS) & Wind Direction (WD)	The wind speed and wind direction (WS/WD) sensor at the Wapasu AMS operated less than 90% of February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on March 11, 2025 (reference number 438503).
		At the end of February, the WS/WD sensor froze due to weather conditions, resulting in intermittent flatlining. In some instances, normal operation returned once weather conditions changed. However, in another instance the sensor required removal and thawing. Data from these events were invalidated, resulting in an operational time of 82.6% for January.

<p>Mannix</p> <p>Total Hydrocarbon (THC), Non-methane Hydrocarbon (NMHC) & Methan (CH₄)</p>	<p>The total hydrocarbon (THC)/non-methane hydrocarbon (NMHC)/methane (CH₄) analyzer at the Mannix AMS operated less than 90% of January and February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on March 21, 2025 (reference number 438805). In addition, this letter supersedes the written follow-up for incident 437900, previously submitted on February 27, 2025.</p> <p>During the daily system check on January 23, it was noted that the daily span of the THC/NMHC/CH₄ analyzer did not meet criteria. As a result, the analyzer was calibrated, the gas cylinder was replaced, and the span was adjusted that day, which temporarily resolved the issue. During the daily system check on February 6, it was noted that the automated daily span had not occurred. An investigation was completed which identified the internal analyzer pump as the cause. On February 13, the internal pump was replaced, performance was verified, and normal operation of the analyzer was restored. During the data validation process, 133 hours of data, resulting in an 82% operational time, and 183 hours of data, resulting in a 72% operational time, were invalidated for the month of January and February, respectively</p>
<p>Mildred Lake</p> <p>Total Hydrocarbon (THC), Non-methane Hydrocarbon (NMHC) & Methan (CH₄)</p>	<p>The total hydrocarbon (THC)/non-methane hydrocarbon (NMHC)/methane (CH₄) analyzer at the Mildred Lake AMS operated for less than 90% of February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on March 24, 2025 (reference number 438873).</p> <p>Throughout February 2025, two issues impacted the operation of the THC/NMHC/CH₄ analyzer, leading to 110 hours of invalid data, resulting in an 83% operational time for the month:</p> <ul style="list-style-type: none"> On February 1, excessive baseline noise was observed in the data. Maintenance was performed, which included analyzer and gas calibration cylinder replacement and an overnight column bake-out followed by calibration and performance verification. Normal operation was restored on February 4. Data during this period was invalidated, resulting in a total of 76 hours. From February 23 to 25, intermittent power failures at the station disrupted the normal operation of the analyzer. Power was restored on February 25, and normal operation resumed. Data during this incident was invalidated, resulting in a total of 34 hours.
<p>Patricia McInnes</p> <p>Total Hydrocarbon (THC), Non-methane Hydrocarbon (NMHC) & Methan (CH₄)</p>	<p>The total hydrocarbon (THC)/non-methane hydrocarbon (NMHC)/methane (CH₄) analyzer at the Patricia McInnes AMS operated less than 90% of February 2025, which is a contravention of the Air Monitoring Directive (AMD) (2016, as amended), Chapter 6, Clause DQ 4-C. This incident was reported to Alberta Environment and Protected Areas (AB EPA) on March 26, 2025 (reference number 438975).</p> <p>Throughout the month of February, excessive baseline noise was consistently observed in the data. In response, the WBEA investigated and carried out several troubleshooting and maintenance procedures, including multiple adjustments to the span and zero, and replacement of the daily zero span valve, support gas cylinder, and actuator. Despite these efforts, the issue remained unresolved. On February 25 the analyzer was replaced, its performance was verified, and normal operation resumed. During the data validation process, a total of 174 hours of data were invalidated, resulting in an operational time of 74%</p>

3.2 Intermittent Monitoring

The results for time-integrated sampling of dustfall, precipitation, PAH, TSP, VOC, PM_{2.5} ECOC, PM_{2.5}, and PM₁₀ will be submitted in the 2025 Annual Report.

3.3 General Network Notes

The Ammonia (NH₃) analyzer currently operates on a 0 to 2500 ppb operating range with a detection level of 5 ppb in the WBEA network. In data processing, values less than five ppb have been considered below detection levels and are reported as zero.

Total hydrocarbon (THC), non-methane hydrocarbon (NMHC), and methane (CH₄) measurements are collected at some air monitoring stations in the WBEA network using the Thermo Environmental model 55i direct THC/CH₄/NMHC analyzer. This analyzer uses a Gas Chromatography (GC) based system, which resets the baseline value at the start of every run. This may cause the ambient background to indicate a response below the expected 1.8 ppm background level. When all measurable criteria indicate valid data during the QAQC and validation process, the data is reported without any additional flags. However, a response below the expected 1.8 ppm triggers an investigation of the analyzer to determine if there is an issue.

Monitoring notes, including changes to monitoring locations, methods, or equipment, and any reporting or monitoring irregularities, for the continuous monitoring stations, are provided on a station-by-station basis. Notes of each interrupted event are provided in chronological order, and meteorological parameters are mentioned last.

In December 2024, the Wood Buffalo Environmental Association began reporting the new Alberta Ambient Air Quality Guideline for Total Reduced Sulfur (TRS) which is a 30-minute average limit of 5 ppb to be used for odour management.

Station 1, Bertha Ganter – Fort McKay

The NH₃ analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily spans and routine monthly multipoint calibrations. Additional time is required for stabilization after exposure to high concentrations of NH₃ gas, and this is an inherent behavior in the NH₃ analyzer operations due to the properties of the NH₃ gas. Data for 1-2 hours following the daily spans have been reported as invalid for a total of 29 hours this month.

Analyzer failure due to sample pump failure of the SO₃ analyzer on February 3 and 4 resulted in 31 hours of invalid data. Subsequent maintenance to replace the sample pump on February 4 resulted in additional 2 hours of downtime.

An internal audit on February 5 and 6 interrupted the normal operations of all air quality analyzers for 1 to 6 hours.

Maintenance to verify daily QA response for the CO and CO₂ analyzer on February 6 resulted in 1 hour of downtime.

Maintenance to replace the sample pump for preventative maintenance of the CO analyzer on February 18 resulted in 4 hours of downtime.

Intermittent flatlines in the output signal of the wind sensor throughout the month resulted in 14 hours of invalid data.

The surface leaf wetness sensor operated out of range on February 27 resulting in 1 hour of invalid data.

Station 2, Mildred Lake

Unstable operation due to excessive baseline noise of the THC/NMHC/CH₄ analyzer on February 1 to 3 resulted in 57 hours of invalid data. Subsequent maintenance to replace calibration gas cylinder and left for stabilization overnight resulted in additional 19 hours of downtime.

Maintenance to replace calibration gas cylinder and stabilization overnight for the SO₂ analyzer on February 1 to 3 resulted in 57 hours of downtime.

Station power failure from February 23 to 25 interrupted the normal operations of all gaseous analyzers for 34 hours.

Intermittent flatlines in the output signal of the wind sensor on February 23 to 25 resulted in 38 hours of invalid data.

Station 3, Lower Camp – Meteorology

Failure to record data of the relative humidity and temperature sensor at 20-meter elevation on February 27 and 28 resulted in 3 hours of invalid data.

Flatline in the output signal of the wind sensor at 20-meter elevation on February 23 resulted in 7 hours of invalid data.

Flatline in the output signal of the wind sensor at 45-meter elevation on February 23 resulted in 5 hours of invalid data.

Flatline in the output signal of the wind sensor at 163-meter elevation on February 27 resulted in 2 hours of invalid data.

Station 4, Buffalo Viewpoint

Unstable operation due to AMD noncompliance of the THC/NMHC/CH₄ analyzer on February 3 and 5 resulted in 49 hours of invalid data.

Maintenance to verify daily QA response for the THC/NMHC/CH₄ analyzer on February 22 resulted in 1 hour of downtime.

Cleaning of the manifold on February 26 interrupted the normal operations of all gaseous analyzers for 1 hour.

Flatlines in the output signal of the wind sensor from February 23 to 26 resulted in 43 hours of invalid data.

Station 5, Mannix

Maintenance to verify daily QA response of all gaseous analyzer on February 1 resulted in 1-2 hours of downtime.

Cleaning of the manifold on February 12 interrupted the normal operations of all gaseous analyzers for 1 hour.

Unstable operation due to excessive baseline drift and failing internal pump of the THC/NMHC/CH₄ analyzer on February 5 to 12 resulted in 177 hours of invalid data. Subsequent maintenance on February 13 to replace internal pump of the analyzer resulted in additional 6 hours of downtime.

Flatline in the output signal of the wind sensor at 20-meter elevation on February 27 resulted in 1 hour of invalid data.

Flatline in the output signal of the wind sensor at 45-meter elevation on February 27 resulted in 1 hour of invalid data.

Flatline in the output signal of the wind sensor at 75-meter elevation on February 27 resulted in 4 hours of invalid data.

Station 6, Patricia McInnes

The NH₃ analyzer required additional time to stabilize to levels below ambient concentrations following the automated daily spans and routine monthly multipoint calibrations. NH₃ analyzers require additional time for stabilization after being exposed to high concentrations, this is due to the physical properties of the NH₃ gas. Data for 1 hour following each daily span has been reported as invalid for a total of 29 hours this month.

Unstable operation due to excessive baseline noise of the THC/NMHC/CH₄ analyzer from February 1 to 3 resulted in 47 hours of invalid data. Subsequent maintenance to replace daily z/s valve on February 4 resulted in additional 5 hours of downtime.

Unstable operation due to excessive baseline noise of the THC/NMHC/CH₄ analyzer from February 17 to 18 resulted in 17 hours of invalid data. Subsequent maintenance to replace the analyzer on February 18 resulted in additional 4 hours of downtime.

Cleaning of the manifold on February 19 interrupted the normal operations of all gaseous analyzers for 1 hour.

Unstable operation due to excessive baseline noise of the THC/NMHC/CH₄ analyzer from February 21 to 22 resulted in 26 hours of invalid data. Subsequent maintenance to replace support gas cylinder and recalibrate the analyzer on February 22 resulted in additional 2 hours of downtime.

Unstable operation due to excessive baseline noise of the THC/NMHC/CH₄ analyzer from February 22 to 23 resulted in 8 hours of invalid data. Subsequent maintenance to replace support gas cylinder, analyzer and required overnight stabilization on February 25 resulted in additional 45 hours of downtime.

Station 7, Athabasca Valley

Note: The TRS daily zero/span check on February 28 was not conducted due to an issue with the calibrator. This issue has since been resolved, and normal operations have resumed.

Unstable operation due to depleting support gas cylinder of the THC/NMHC/CH₄ analyzer on February 7 to 8 resulted in 35 hours of invalid data. Subsequent maintenance to replace the support gas cylinder on February 8 resulted in additional 1 hour of downtime.

Station 8, Fort Chipewyan

Analyzer failure due to inoperable converter of the TRS analyzer on February 1 to 3 resulted in 61 hours of invalid data.

Unstable operation due to AMD noncompliance of the TRS analyzer on February 6 to 21 resulted in 362 hours of invalid data.

Unstable operation due to flatline in the analyzer output signal of the CO₂ analyzer on February 16 resulted in 1 hour of invalid data.

Unstable operation due to flatline in the analyzer output signal of the NO_x/NO/NO₂ analyzer on February 16 resulted in 1 hour of invalid data.

Station 9, Barge Landing

Flatlines in the output signal of the wind sensor at 10-meter elevation throughout the month resulted in 3 hours of invalid data.

Flatline in the output signal of the wind sensor at 20-meter elevation on February 2 resulted in 1 hour of invalid data.

Note: Relative humidity and temperatures can affect the performance of the SO_x scrubbers in the H₂S and TRS analyzer. During these events, the sulfur concentrations take a longer period to stabilize during the daily span checks. Therefore, the H₂S/TRS span were outside of the 10% AMD criteria on February 13 to 14.

Station 11, Lower Camp

Maintenance to replace support gas cylinder of the THC/NMHC/CH₄ analyzer on February 27 resulted in 2 hours of downtime.

Flatlines in the output signal of the wind sensor on February 12, 15 and 28 resulted in 3 hours of invalid data.

Station 13, Fort McKay South

Note: The TRS daily span check fell outside of the AMD criteria on February 28 due to an extended stabilization period of the newly installed calibration gas cylinder. Daily span checks have since stabilized.

Flatlines in the output signal due to frozen wind sensor throughout the month resulted in 10 hours of invalid data.

Station 14, Anzac

Cleaning of the manifold on February 10 interrupted the normal operations of NO_x/NO/NO₂, O₃, and TRS analyzers for 1 hour.

Maintenance to verify daily QA response of the TRS analyzer on February 19 resulted in 19 hours of downtime.

The daily span check for the TRS analyzer was outside the 10% AMD criteria throughout the month due to extreme cold weather conditions.

Station 17, Wapasu

Unstable operation due to excessive baseline drift of the THC analyzer on February 1-3 resulted in 8 hours of invalid data.

Flatlines in the output signal of the wind sensor on February 23 to 28 resulted in 100 hours of invalid data. Subsequent maintenance to de-ice the sensor on February 26 resulted in additional 2 hours of downtime.
