

**WOOD BUFFALO ENVIRONMENTAL ASSOCIATION
ANNUAL AMBIENT AIR QUALITY MONITORING REPORT
2024
REPORT HISTORY**

Original report release date: March 31, 2025

Revised report release date: April 3, 2025

Revision 1: Corrected “Number of Values Exceeding 1-hour Objective” for Particulate Matter 2.5 (PM_{2.5})

During the review of the 2024 Annual Report, it was identified that the number of 1-hour exceedances for PM_{2.5} was incorrectly reported on the annual report, volume 1, pages 471 to 485. This error resulted from a temporary bulk reporting protocol in effect from April 1, 2024, to October 31, 2024. The software used to generate the tables did not account for this protocol change, leading to incorrect exceedance values being reported.

Once the issue was identified, WBEA staff manually corrected the exceedance numbers and submitted the accurate data to Alberta Environment and Protected Areas (AB EPA).

On April 3, 2025, the revised annual report, reflecting the corrected values for each affected parameter and station, was resubmitted to the Electronic Transfer System (ETS).

RE: Annual Ambient Air Quality Monitoring Report 2024
Wood Buffalo Environmental Association

Enclosed is the 2024 Annual Ambient Air Quality Monitoring Report for the Wood Buffalo Environmental Association (WBEA) regional air monitoring network. The WBEA works closely with Alberta Environment and Protected Areas (AEPA) and funding for this work was provided by the Oil Sands Monitoring Program (OSM). It is independent of any position of the OSM Program.

The continuous ambient air quality monitoring network stations are:

AMS 01 – Bertha Ganter – Fort McKay	AMS 21 - Conklin
AMS 02 – Mildred Lake	AMS 22 – Janvier
AMS 03 – Lower Camp (Meteorology)	AMS 23 – Fort Hills
AMS 04 – Buffalo Viewpoint	AMS 25 – Waskōw ohci Pimâtsiwin
AMS 05 – Mannix	AMS 26 – Christina Lake
AMS 06 – Patricia McInnes	AMS 27 – Jackfish 2/3
AMS 07 – Athabasca Valley	AMS 29 – Surmont 2
AMS 08 – Fort Chipewyan	AMS 30 – Ells River
AMS 09 – Barge Landing	AMS 33 – Monday Creek
AMS 11 – Lower Camp (Air Quality)	AMS 501 – Leismer
AMS 13 – Fort McKay South	AMS 505 – Sawbones Bay
AMS 14 – Anzac	AMS 506 – Jackfish 1
AMS 17 - Wapasu	AMS 507 – Kirby South
AMS 18 – Stony Mountain	AMS 508 – Kirby North
AMS 19 - Firebag	AMS 511 – Blackgold
AMS 20 – MacKay River	AMS 512 – Hangingstone Expansion

This report is submitted by the WBEA on behalf of its members. This report may also satisfy the ambient air reporting requirements in industry members' EPEA Approvals (as amended):

1. Introduction

The WBEA is a multi-stakeholder, consensus-based, not-for-profit association that strives to lead in state-of-the-art environmental monitoring to enable informed decision-making. The WBEA monitors the ambient air quality of the Regional Municipality of Wood Buffalo 24 hours a day and 365 days a year.

1.1 Air Monitoring Parameters

Table 1 provides a list of stations with their names and corresponding WBEA identification number, and the air quality parameters measured by continuous methods at each site. Parameters measured include hydrogen sulphide (H_2S), total reduced sulphur (TRS), sulphur dioxide (SO_2), nitrogen dioxide (NO_2), ozone (O_3), fine particulate matter ($PM_{2.5}$) total hydrocarbons (THC), methane (CH_4), non-methane hydrocarbons (NMHC), carbon dioxide (CO_2), carbon monoxide (CO) and ammonia (NH_3). Sites are categorized based on the setting in which they are located.

Table 1. Summary of stations and parameters measured continuously at WBEA sites.

1.2 Air Monitoring Site Locations

The map in Figure 1 shows the locations of all WBEA continuous air quality monitoring. Continuous monitoring sites are in areas of development, primarily along the Athabasca River Valley and cover the region from Conklin to Fort Chipewyan.

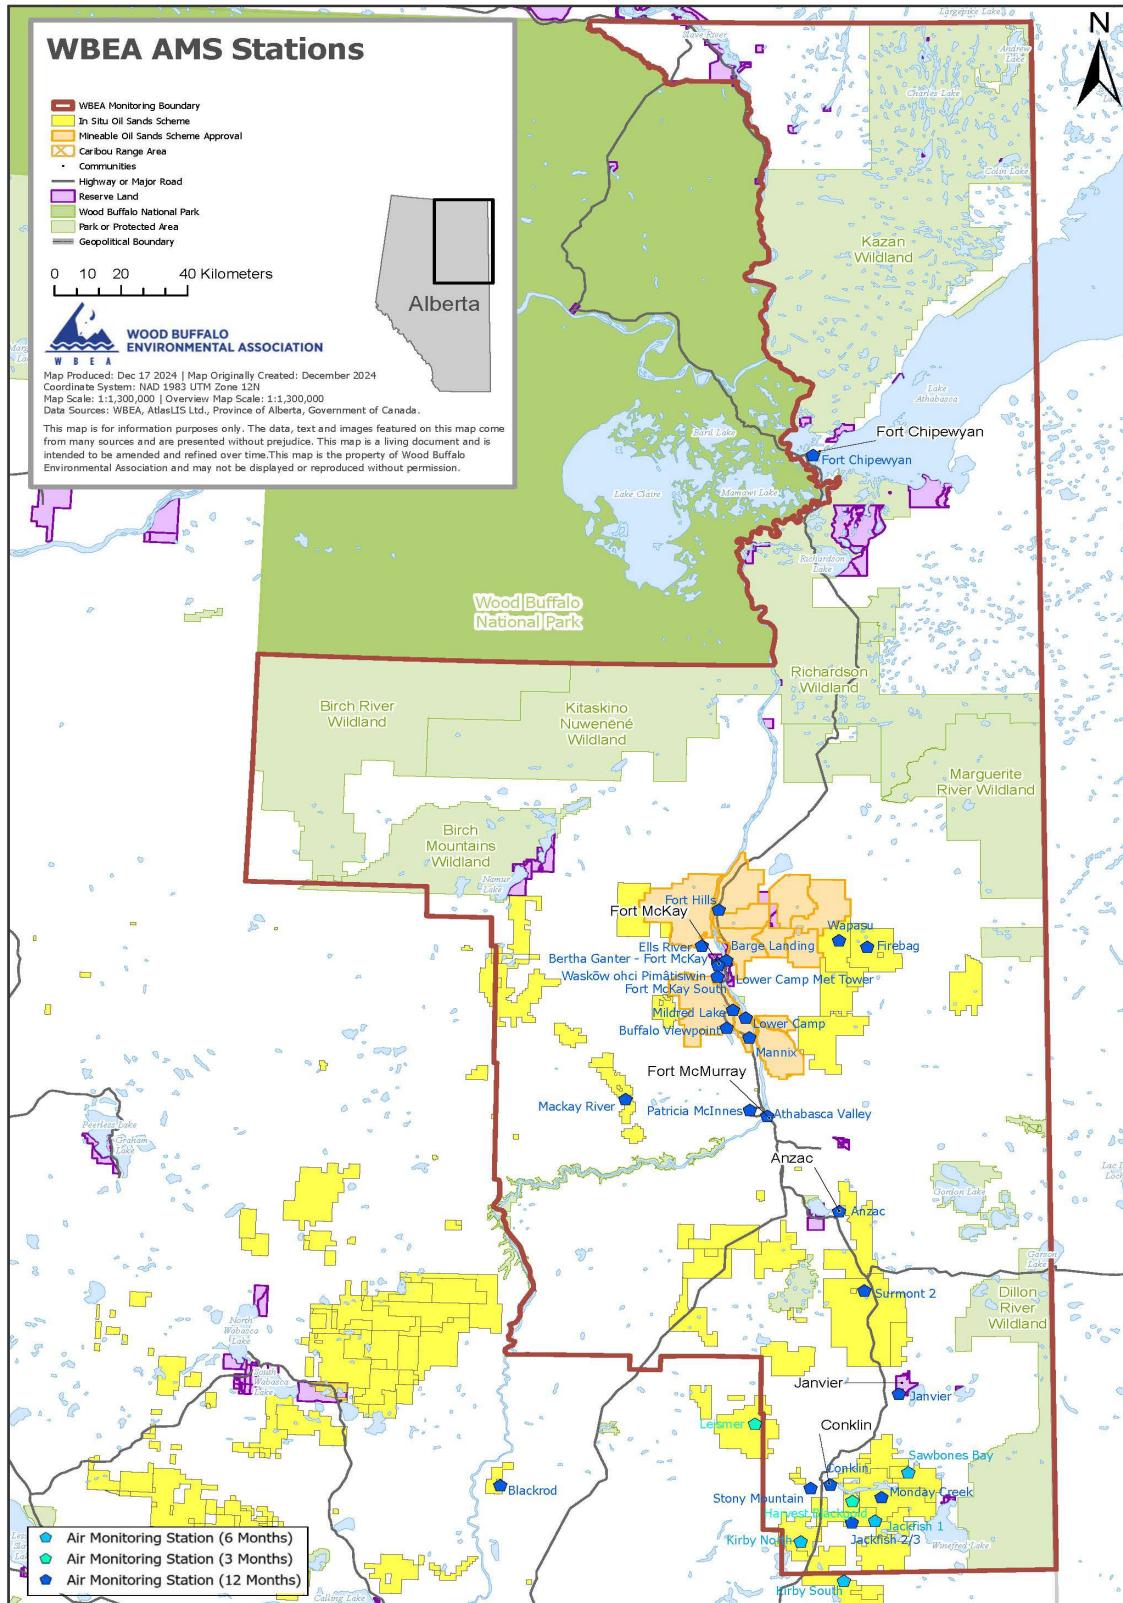

Figure 1. Continuous Air Monitoring Station Locations

2. Summary of Changes to the WBEA Air Monitoring Network

The WBEA retrieved ambient air quality monitoring station, Leismer, at the Athabasca Oil Leismer facility on April 1, 2024. The monitoring was conducted from October 1, 2023, until April 1, 2024, to fulfill the requirements of EPEA approval number 241311-00, as amended. The current EPEA approval for the Athabasca Oil Leismer facility requires ambient air monitoring at the facility for three months per calendar year. This station was equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA retrieved ambient air quality monitoring station, Blackgold, at the Harvest Operations Corp. facility on April 1, 2024. The monitoring was conducted from October 1, 2023, until April 1, 2024, to fulfill the requirements of EPEA approval number 246984-01-00, as amended. The current EPEA approval for the Harvest Operations Corp. facility requires ambient air monitoring at the facility for three months per calendar year. This station was equipped with ambient air quality analyzers for SO₂, H₂S, THC, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA conducts 6-months of monitoring each year at two sites, Kirby North and Kirby South, to meet the requirements of EPEA approval number 237382-01-00. Kirby South completed monitoring on June 30, 2024, and was moved to Kirby North on July 4, 2024. This station is equipped with ambient air quality analyzers for SO₂, H₂S, THC, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA commenced ambient air quality monitoring at the Jackfish 1 air monitoring station, at the Canadian Natural Resources Limited Jackfish 1 facility on July 1, 2024, to fulfill the requirements of EPEA approval number 224816-01-00, as amended. The current EPEA approval for the Canadian Natural Jackfish 1 facility requires ambient air monitoring at the facility for six months per calendar year. This station is equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA retrieved the ambient air quality monitoring station at Sawbones Bay, at the MEG Energy facility on July 1, 2024. The monitoring was conducted from July 1, 2023, until July 1, 2024, to fulfill the requirements of EPEA approval number 216466-01, as amended. The current EPEA approval for the MEG Energy Christina Lake facility requires ambient air monitoring at the facility for six months per calendar year. This station is equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA commenced ambient air quality monitoring at the Hangingstone Expansion air monitoring station, at the Greenfire Resources Operating Corporation facility on July 1, 2024, to fulfill the requirements of EPEA approval number 153105-01-00, as amended. The current EPEA approval for the Greenfire Resources Hangingstone Expansion facility requires ambient air monitoring at the facility for six months per calendar year. This station is equipped with ambient air quality analyzers for SO₂, H₂S, NO, NO₂, NO_x, and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

The WBEA relocated Christina Lake air monitoring station to a new location within the Christina Lake facility operated by Cenovus Energy Inc. Christina Lake was removed from service on November 5, 2024 and was deployed as Monday Creek air monitoring station on November 7, 2024. Christina Lake and Monday Creek fulfill EPEA approval number 48522-02-00. This station is equipped with ambient air quality analyzers for

SO_2 , H_2S , NO , NO_2 , NO_x , and meteorological sensors for ambient temperature, relative humidity, and wind speed and direction.

In 2024, no new parameters were added to the WBEA network, nor were any existing analyzers replaced with updated technology.

3. Concentrations in Excess of Alberta Ambient Air Quality Objectives and Guidelines

Alberta Environment and Protected Areas (AEPA) has developed and issued a new ambient air quality guideline (AAAQG) for Total Reduced Sulphur (TRS) under Section 14(4) of the Environmental Protection and Enhancement Act, 1992. The updated guideline sets a 30-minute average limit of 5 ppb, with a focus on odour management. This guideline took effect within the WBEA network on December 13, 2024. As part of this change, the WBEA will no longer apply the Hydrogen Sulphide (H_2S) Alberta Ambient Air Quality Objective when assessing TRS exceedances. Moving forward, the WBEA will report solely against the TRS 30-minute AAAQG to align with AEPA's approach to air quality management.

Prior to the implementation of the TRS AAAQG, the WBEA airshed reported ambient air concentrations for total reduced sulphur (TRS) in excess of the H_2S AAAQO to AEPA. The statistical summary of the previous 5-year comparisons for ambient concentrations in excess of the AAAQOs and AAAQGs are shown in Figure 3. Until December 31, 2024, the H_2S summary includes the TRS concentrations in excess of the H_2S objectives.

During the 2023 wildfire season, the WBEA experienced a significant number of Alberta Ambient Air Quality Guideline (AAAQG) exceedances for 1-hour $\text{PM}_{2.5}$ due to a prolonged wildfire season. This high volume of exceedances created a reporting burden and increased calls to Alberta Environmental and Dangerous Goods Emergencies (Alberta EDGE). In response, AEPA implemented the Temporary Alberta Airshed Wildfire Bulk Reporting Protocol to streamline reporting. For the 2024 wildfire season (April 1 to October 31), AEPA rescinded the requirement to report AAAQG PM_{2.5} exceedances under this protocol to prioritize managing high-risk environmental issues. The WBEA followed AEPA's protocol, ensuring full compliance with the established reporting guidelines.

A detailed summary of ambient concentrations in excess of the Alberta Ambient Air Quality Objectives (AAAQOs) and Ambient Air Quality Guidelines (AAAQGs), including site, parameter, date & time, reference number, exceedance period, reported and final concentration, and status are included in Appendix I of the report.

WBEA Ambient Air Monitoring Network Ground level concentrations in excess of AAAQOs and AAAQGs.

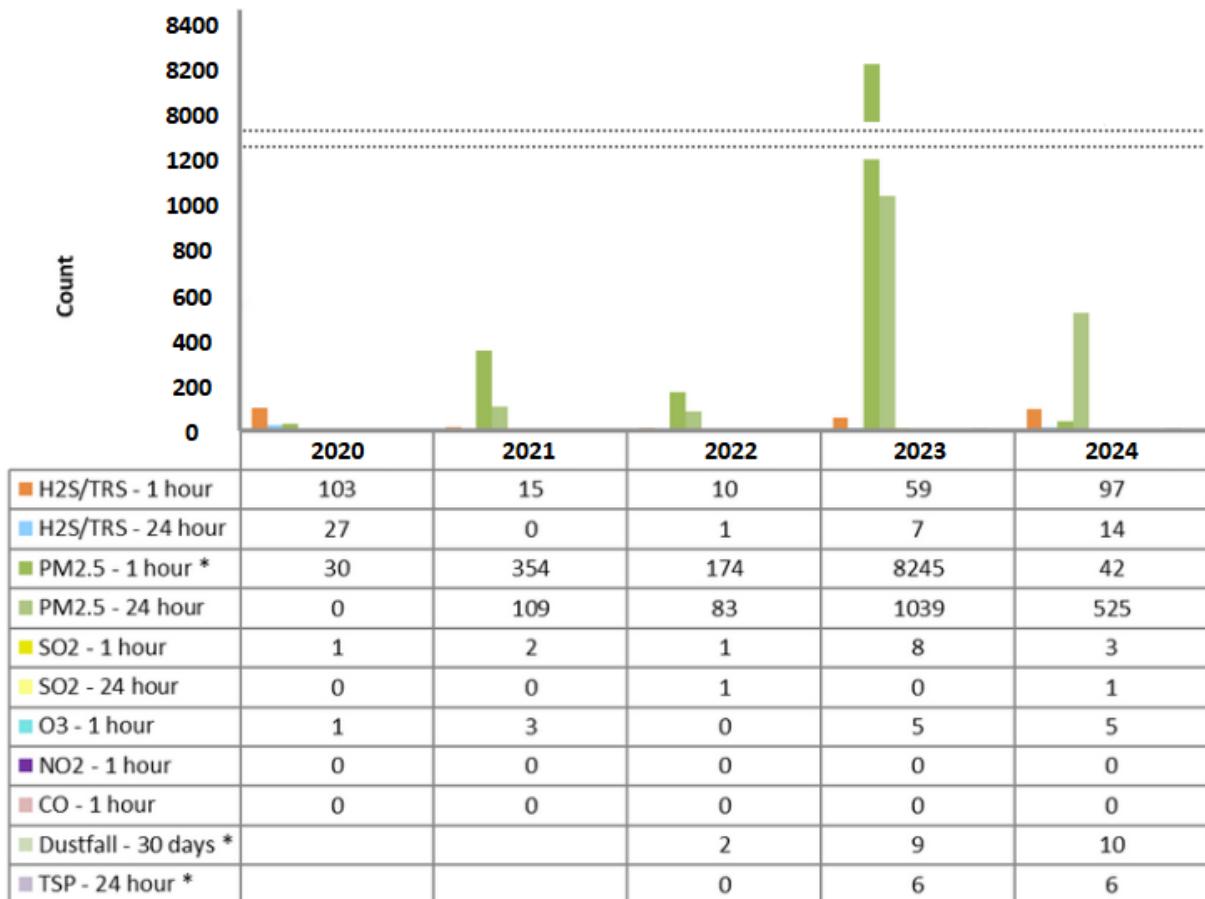

Figure 2. Ambient Air Concentrations in excess of the AAAQO and AAAQG (2020-2024)

*The PM_{2.5} 1-hour AAAQG was established on January 1, 2019

*The Dustfall 30-days AAAQG was first reported by the WBEA in November 2022

*The TSP – 24-hour AAAQO was first reported by the WBEA in September 2022

4. Operational Status – Instrument Operation Below 90 Percent of the Time

In 2024, there were 50 incidents of compliance monitoring instruments operating less than 90% of the time or other AMD non-compliances. A detailed summary of these incidents, including date, reference number, description, location, issue, and remedial action are included in Appendix II of the report.

5. External Audits and Results

Between the dates of July 3-12, 2024, AEPA conducted an audit of the following WBEA ambient air monitoring stations: Anzac, Wapasu, Barge Landing, Fort Hills, Athabasca Valley, Patricia McInnes, Bertha

Ganter, Buffalo Viewpoint, Lower Camp, Ells River, Mildred, Fort McKay South, and Waskow ochi Pimatisiwin. On July 12, AEPA decided to suspend the audit due to poor air quality related to wildfires and high ambient temperatures which were impacting analyzer performance and the audit. During the audit, the following instruments were found to be outside the Alberta Air Monitoring Directive (AMD) – Chapter 8 Audit Assessment Criteria and Chapter 7 Calibration:

1. The non-methane hydrocarbon analyzer in Fort Hills failed the low point on the non-methane channel. The low point was 11% higher than the expected value. Further testing was completed by WBEA's internal audit program, and a similar trend was demonstrated.

After the audit was completed at Fort Hills, the WBEA completed additional testing and audit results were confirmed. On July 10, the instrument was replaced to resolve the issue.

2. There were three T640 failures in the network. The T640s at Athabasca Valley, Patricia McInnes, and Buffalo Viewpoint all had span dust readings that were $> +/- 0.5$ from the expected reading. Technicians were advised to complete the necessary maintenance and perform a PMT adjustment. The following steps were taken to address the issues:

- o Athabasca Valley: On July 8, the WBEA completed optical chamber and sample inlet cleaning, as well as a PMT adjustment.
 - o Patricia McInnes: On July 8, the WBEA completed optical chamber cleaning, as well as a PMT adjustment.
 - o Buffalo Viewpoint: On July 10, the WBEA completed optical chamber cleaning, PMT adjustment was not required after maintenance.
3. The H₂S analyzer at Mildred Lake failed to stabilize and read within 10% of the expected value within the allotted 20 minutes. The point was continued for an extended amount of time, and it did eventually reach stability at 8% low. Auditors were advised that maintenance had been completed on July 8th, two days prior to the audit due to a failed span. Upon further inspection, a loose fitting on the sample/span valve, as well as an excess of tubing between the manifold and analyzer, may have contributed to the excessive response time. The technician attached their sample calibration line directly to the oxidizer and response time was drastically reduced.

As indicated, this analyzer had been experiencing issues prior to the audit and the WBEA had performed maintenance on July 5, 8, and 9 including replacement of the scrubber beads, H₂S converter and pump. On July 11, after audit completion, the WBEA addressed the loose fitting on the sample/span valve and replaced all sample lines. In addition, the length of the sample line was reduced by relocating the instrument closer to the converter. On July 16, the span response slowed again, and the analyzer was replaced that day, resolving the issue. Data was invalidated from June 30 to July 11 due to the issues with this analyzer.

6. Monthly Report Revisions

The following revisions were identified during the year and made to associated monthly reports:

Revised Report	Revision	Details
April, June, July, 2019	Revision of PM _{2.5} Data at Stony Mountain	<p>During the revision of T640 PM_{2.5} data, it was discovered that the SHARP PM_{2.5} data for the month of April, June, and July of 2019, had an unintentional offset of 0.7 ug/m³ in the final five-minute dataset. Upon review, the WBEA found that this correction was mistakenly applied and subsequently removed the correction factor retroactively to recalculate the final hour averages. The updated data and revised summaries were then submitted to the Electronic Transfer system on May 6, 2024.</p>
June 2024	Baseline correction of O ₃ analyzer at Fort McKay South and CO ₂ analyzer at Stony Mountain	<p>Ozone (O₃) data for the Fort McKay South air monitoring station (AMS) for June was revised to remove daily baseline-corrected values from June 23 to 30, which were determined to have been influenced by a power failure on June 23. This power interruption affected the in-situ calibrator configuration until June 30, impacting the hourly O₃ concentrations for that period.</p> <p>During the Level 3 data validation process, it was discovered that CO₂ baseline correction points were inadvertently not accepted during the Level 2 data validation from June 18 to June 30. The acceptance of these baseline corrections resulted in changes to the hourly CO₂ concentrations for that timeframe.</p> <p>As a result, CO₂ data at Stony Mountain AMS and O₃ data at Fort McKay South for the month of June was revised. On August 29, 2024, the monthly reports, data reports, were re-submitted to the Electronic Transfer System (ETS).</p>
October 2019 – October 2020	Resubmission of PM _{2.5} Data at Buffalo Viewpoint	<p>Following a review, it was determined that the PM_{2.5} data for Buffalo Viewpoint, originally collected using a Thermo Scientific, Model SHARP 5030 analyzer, was submitted to the Alberta Air Data Warehouse under an incorrect VVC code. On September 22, 2020, the Thermo Scientific, Model SHARP 5030 analyzer was replaced with an API, Model T640 analyzer, and data collected thereafter has been submitted correctly with no issues. To ensure that the historical data accurately reflects the measurements from the Thermo Scientific, Model SHARP analyzer, the WBEA will resubmit the data for the period of October 1, 2019, to October 1, 2020, under the appropriate VVC code.</p> <p>The PM_{2.5} data from Buffalo Viewpoint for this period has been reviewed and validated through the WBEA's quality assurance process, with no changes made. The data was submitted through the ETS on January 24, 2025.</p>

7. 2011-2024 WBEA Data Compared to LARP Triggers and Limits

Official assignment of air quality levels against the LARP triggers and limits, and reporting on management responses, is conducted and made publicly available by AEPA. However, a summary of data from the WBEA air monitoring stations compared to the Lower Athabasca Regional Plan (LARP) trigger levels and limits for NO₂ and SO₂ is provided in Appendix III.

8. 2024 Annual Air Concentrations

This report contains a summary of operational times for the year, the monthly averages, the number of readings in excess of the AAAQO/Gs, frequency distributions of 1-hour data, and annual average concentration plots over the past five years. Annual average concentration plots have been provided for stations for which there is more than one year of data, and for which 12-month monitoring is completed. Calculation of annual averages cannot be provided for portable monitoring stations which are only required to monitor for 3 or 6 months per year, based on their EPEA approval.

Annual statistics for all integrated results are provided for all species analyzed.

If additional information is required, please contact either Emilie Briggs at (780) 747-8219 or the Wood Buffalo Environmental Association at (780) 799-4420.

Yours sincerely,

Wood Buffalo Environmental Association

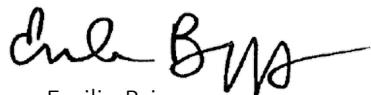

The representative of the Person Responsible for this monitoring program is Emilie Briggs, Operations Manager WBEA.

Report prepared and submitted by Asad Hidayat and Denny Estador of the WBEA and reviewed by Emilie Briggs of WBEA. The WBEA has retained the services of Air Resource Specialists (ARS) to conduct reporting functions on its behalf, specifically, Level 3 – Independent Assessment. As required, the contact information for WBEA staff is included below.

Asad Hidayat, Data Technician
Wood Buffalo Environmental Association

WOOD BUFFALO ENVIRONMENTAL ASSOCIATION

CONTINUOUS AMBIENT AIR QUALITY MONITORING PROGRAM ANNUAL REPORT

NITRIC OXIDE ANNUAL 2024

Operations, Data Collection,
QA/QC, Data Validation and Reporting by:
Wood Buffalo Environmental Association
Fort McMurray, Alberta

March 2025

Wood Buffalo Environmental Association - Fort McKay - Bertha Ganter (AMS01)
Annual Summary for the Year 2024
Nitrogen Oxide (ppb) Average

Month	Operational Time (%)	Number of Data	Mean Value	Maximum 1-Hour Value	Maximum 24-Hour Value	% of Data in Each Concentration Range			
				0 - 40	41 - 80	81 - 159	>159		
January	100	707	7.4	75.0	39.6	95.6	4.4	0.0	0.0
February	100	659	6.0	67.6	24.7	97.6	2.4	0.0	0.0
March	100	706	1.6	25.2	6.4	100.0	0.0	0.0	0.0

*status legend:

late - exceedance, raw values were not found to be in exceedance in real time, and/or were not reported, but final values were found to be an exceedance after data processing.

exc - exceedance, raw values reported in real time were confirmed to be in exceedance after data processing.

nae - not an exceedance, raw values reported in real time were found not in exceedance after data processing.

ret - retracted, reported exceedance was found to be not an exceedance after investigation of measurement system status and/or validation of raw data in conjunction with all associated measurement parameters.

WOOD BUFFALO ENVIRONMENTAL ASSOCIATION

CONTINUOUS AMBIENT AIR QUALITY MONITORING PROGRAM ANNUAL REPORT

APPENDIX II: SUMMARY OF MONTHLY OPERATIONAL TIMES BELOW 90 PERCENT AND NON-COMPLIANCES 2024

Operations, Data Collection,
QA/QC, Data Validation and Reporting by:
Wood Buffalo Environmental Association
Fort McMurray, Alberta

March 2025

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
January	24-Jan-24	424206	Fort Chipewyan	The CO2 analyzer at the Fort Chipewyan AMS operated for less than 90% of December 2023, due to operator error.	On December 26, an onsite CO2 calibration failed the AMD criteria due to operator error, resulting in no valid calibration for the month of December. Prior to this incident, all daily quality assurance checks for the month of December were within AMD criteria. Following this incident, the CO2 daily span was above the AMD limits. The WBEA conducted a remote investigation and maintenance to correct the linearity of the instrument on January 3. On January 18, the CO2 analyzer's regular functionality was ultimately restored and resolved the issue following an on-site multipoint calibration. During the data validation process, the WBEA conservatively invalidated data between December 26 and January 18, resulting in 545 hours of invalid data.	The WBEA has communicated with right personnel regarding this operator error and provided them with tools and training to avoid the error in future.
January	24-Jan-24	424246	Lower Camp Met Tower	The WS/WD/VWS at the 45-meter, 100-meter and 163-meter elevation at Lower Camp Met Tower operated less than 90% of January 2024, due to ice fog events.	Throughout January 2024, intermittent flat-line periods in the WS/WD/VWS sensors' output signal at all three elevations occurred. Ice fog interfering with the sonic sensors is considered to be the most likely cause and the sensor operation returned to normal once weather conditions changed. Also, intermittent periods of data acquisition system failure resulted in additional downtime. During the data validation process, a total of 181, 121, and 143 hours were invalidated at the 45-meter, 100-meter, and 163-meter elevations, respectively.	NA
January	21-Feb-24	425140	Anzac	The THC/NMHC/CH4 analyzer at Anzac AMS operated less than 90% of January 2024, due to two different issues.	There were two issues associated with the operation of the THC/NMHC/CH4 analyzer that resulted in 122 hours of analyzer downtime. -On January 15 and January 24, the instrument's baseline was within acceptable AMD criteria, however, the data appeared noisy, and the baseline was dipping. An investigation, and subsequent maintenance, was conducted to resolve the issue, resulting in 70 hours of invalid data. -On January 30, the noisy data and dipping baseline issue persisted, prompting the replacement of the analyzer. The replacement, and subsequent performance verification, resulted in an additional 52 hours of invalid data.	The analyzer was replaced on January 30 to rectify this issue.
January	23-Feb-24	425252	Stony Mountain	The THC/NMHC/CH4 analyzer at Stony Mountain AMS operated less than 90% of January 2024, due to the station door was compromised and station temperature dropped below the range required for adequate operation of the air monitoring equipment.	On January 2, the station door was compromised, and the station temperature dropped below the range required for adequate operation of the air monitoring equipment. The WBEA completed repairs to the door and invalidated data associated with this period for a total of 90 hours. Additionally, throughout the remainder of the month, the instrument baseline appeared unstable. The WBEA completed several troubleshooting and maintenance activities to return the instrument to normal operation and ultimately replaced the instrument on January 23. Data was invalidated for periods of unstable baseline and maintenance for a total of 262 hours.	The WBEA completed repairs to the door and invalidated data associated with the incident.
February	11-Mar-23	425774	Surmont 2	The THC analyzer at the Surmont 2 air monitoring station (AMS) operated less than 90% of February 2024, due to suspected zero-air generator.	During the daily system check on February 24, the daily zero for THC was elevated and the daily span response was outside the AMD criteria. The WBEA investigated and determined the zero-air generator was defective and could not maintain adequate pressure. On February 26, the zero-air generator was replaced, its performance was verified, and the issue was resolved. During the monthly data validation process a total of 86 hours of data were invalidated due to this incident, resulting in an 86% operational time for February.	Zero-air generator was replaced and analyzer performance check was completed.
February	12-Mar-23	425820	Lower Camp Met Tower	The WS/WD/VWS sensor at the 163-meter elevation at Lower Camp Met Tower operated less than 90% of February 2024, due to ice fog and data logger communication issues.	Throughout February, there were intermittent flat-line periods in the WS/WD/VWS sensors' output signal at the 163-meter elevation. Ice fog interfering with the sonic sensor is considered to be the most likely cause and the sensor operation returned to normal once weather conditions changed. Also, periodic failure of the data acquisition system resulted in additional downtime. During the data validation process, a total of 92 hours of data were invalidated, resulting in 87% operational time for February.	The logger net was reset.
April	18-Apr-24	427024	Anzac	The WS/WD sensor at the Anzac AMS operated less than 90% of April 2024, due to a broken sensor.	On April 8, during the data validation process, the WBEA noted that the WS/WD sensor was not accurately reading and an on-site investigation determined a wire within the sensor had broken. The sensor was replaced that day and the issue was resolved. A total of 121 hours of data were invalidated due to this incident.	The sensor was replaced.
April	08-May-24	427717	Firebag	The WS/WD sensor at the Firebag AMS operated less than 90% of April 2024, due to a frozen sensor.	Throughout April, the WS/WD sensor froze due to weather conditions which resulted in intermittent flat-line periods in the output signal. The sensor operation returned to normal when weather conditions changed. Following data validation, a total of 81 hours of data were invalidated due to this issue, resulting in 89% operational time for April.	N/A

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
April	23-May-24	428314	Conklin	The NO/NO ₂ /NO _x analyzer at the Conklin AMS operated for less than 90% of April 2024, due to damaged sample pump.	On April 16, during the daily system check, the daily zero span was outside of acceptable criteria. That day, a site investigation determined the sample pump was damaged, the pump was replaced, and the instrument was left to stabilize overnight. On April 17, a follow-up calibration was completed, the analyzer performance was verified, and the issue was resolved. During the data validation process, a total of 89 hours were invalidated due to this incident.	The pump was replaced.
April	26-May-24	428412	Sawbones Bay	The relative humidity (RH) sensor at the Sawbones Bay air monitoring station (AMS) operated less than 90% of April 2024, due to over-ranging.	During routine daily system checks, it was identified that the RH measurements were over-ranging periodically, with the output signal of the sensor displaying values beyond 100%. On April 17, the RH sensor was replaced, and normal operations resumed. Data was invalidated during periods when RH measurements were inconsistent with comparable data in the WBEA ambient network, resulting in a total of 87 hours of invalid data.	The sensor was replaced.
April	28-May-24	428500	Conklin	The THC/NMHC/CH ₄ analyzer at Conklin AMS operated less than 90% of April 2024, due to noisy baseline.	From April 17 through 22, the instrument baseline data appeared noisy. The WBEA continued to troubleshoot the issue throughout that period, including the replacement of the actuator. However, the issue persisted and prompted the replacement of the analyzer on April 22. A total of 86 hours of data were invalidated due to this incident.	The analyzer was replaced on April 22.
April & May	09-May-24	427764	Lower Camp Met Tower	The WS/WD/VWS sensor at the 45-meter elevation at the Lower Camp Met Tower operated less than 90% of April and May 2024, due to communication issue.	Throughout April, the WS/WD/VWS sensor at the 45-meter elevation experienced communication issues. The WBEA continued to troubleshoot and ultimately determined the sensor was defective as it was unable to maintain stable communication. On May 6, the sensor was replaced, its performance was verified, and the issue was resolved. During the data validation process, a total of 378 hours of data were invalidated; 249 hours for April and 129 hours for May.	The sensor was replaced on May 6.
May	24-May-24	428349	Stony Mountain	The PM _{2.5} analyzer at Stony Mountain AMS operated less than 90% of May 2024, due to the heating stack issue.	On May 15, the PM _{2.5} data flatlined, indicating the analyzer was not operating as normal. Routine maintenance was conducted, and the issue was temporarily addressed. On May 19, the issue reoccurred, and additional investigation determined the particulate matter heating stack was the cause. On May 21, the heating stack was replaced, the performance of the analyzer was verified, and the issue was resolved. During the data validation process, a total of 157 hours of data were invalidated due to this incident.	The heating stack was replaced.
May	05-Jun-24	428792	Mannix	The SO ₂ and THC/NMHC/CH ₄ analyzers at Mannix AMS operated less than 90% of May 2024, due to station maintenance/upgrade.	During the week of May 21, the Mannix AMS shelter was replaced due to its advanced age and as part of planned maintenance and upgrades of the network. Activities associated with the shelter replacement, including returning to normal operations resulted in over 90 hours of invalid data.	N/A
May	05-Jun-24	428793	Mannix	The RH sensor at 75-meter elevation at Mannix AMS operated less than 90% of May 2024, due to over-ranging.	During monthly data validation, it was determined that the RH measurements at the 75m elevation were over-ranging periodically, with the output signal of the sensor displaying values above 100%. The WBEA is reliant on a third-party contractor, and subsequently their schedule, to complete the sensor replacement. The contractor has been notified. Data was invalidated during periods when RH measurements were inconsistent with comparable sensors in the WBEA ambient network, resulting in a total of 99 hours of invalid data and 86.69% operational time for May.	The sensor was replaced.
May	11-Jun-24	429031	Barge Landing	The THC/NMHC/CH ₄ analyzer at Barge Landing AMS operated less than 90% of May 2024, due to a baseline drift.	This instrument is a semi-continuous gas chromatograph that requires the CH ₄ and NMHC peaks to remain within the data capture windows. On May 8, these peaks shifted outside of the optimal data capture windows and as a result, the baseline shifted outside of the normal range. Throughout May, the WBEA performed multiple maintenance activities, including adjustments of the optimal data capture window, replacement of a line tube due to a leak, and associated as founds and calibrations. Ultimately, the analyzer was replaced, and normal operation resumed, on May 10, 2024. Following data validation, a total of 79 hours of data were invalidated due to this incident, resulting in an operational time of 88.84% for May.	The analyzer was replaced on May 10, 2024.
June	12-Jul-24	430310	Sawbones Bay	The SO ₂ , H ₂ S, and NO ₂ analyzers at the Sawbones Bay air monitoring station (AMS) operated for less than 90% of June 2024, due to scheduling error.	The Sawbones Bay AMS is a portable station that fulfills a six-month continuous monitoring requirement before it is removed from operation and relocated elsewhere in the ambient air network. Due to a scheduling error, the removal calibrations, and subsequent analyzer shut down, were completed earlier than necessary, resulting in an operational time of 88.5% for the month of June.	The WBEA has reviewed the incident details with appropriate personnel to determine how to prevent similar scheduling errors in the future.

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
June	15-Jul-24	430416	Mannix	The relative humidity (RH) sensor at the 75m elevation at the Mannix air monitoring station (AMS) operated less than 90% of June 2024.	During monthly data validation, it was determined that the RH measurements at the 75m elevation were over-ranging periodically, with the output signal of the sensor displaying values above 100%. The WBEA is reliant on a third-party contractor, and subsequently their schedule, to complete the sensor replacement. Data was invalidated during periods when RH measurements were inconsistent with comparable sensors in the WBEA ambient network, resulting in 85.28% operational time for June.	The contractor was notified in May when the issue was first identified (reference number 428793) and has since been scheduled for September 2024.
June	29-Jul-24	431102	Stony Mountain	The precipitation collector at the Stony Mountain air monitoring station (AMS) operated for less than 90% of June 2024, due to communication issues.	On June 10, during a routine system check, the WBEA field technician identified that the data logger was not communicating with the precipitation collector. The data logger was reset, and communications resumed on June 10 at 6:00 MST. Another similar event occurred on June 28, when it was again identified that the data logger was not communicating with the precipitation collector. The data logger was reset, and communications resumed on June 28 at 8:00 MST. During the monthly data validation process, it was determined that the communications failure of the precipitation collector during both events resulted in a total of 184 hours of invalidated precipitation data in June.	The data logger was reset both times and the issue was discussed with the station assigned tech to monitor it closely.
July	16-Jul-24	430460	Mildred Lake	The H2S analyzer at the Mildred Lake AMS operated for less than 90% of July 2024, due to daily QA checks not meeting AMD compliance.	During the first week of July, the H2S analyzer daily spans were intermittently erratic and failed to meet AMD criteria. Throughout July, the WBEA attempted to troubleshoot the issue including replacement of the scrubber beads, external converter, sample lines, and ultimately, replacement of the analyzer. Despite troubleshooting efforts, the issue persists and investigation is ongoing at the time of letter submission. Through observations of H2S analyzers throughout the network, it is suspected that poor air quality and intense smoke events in July may be impacting operation of this analyzer.	The WBEA technician replaced scrubber beads, external converter, sample lines, and ultimately the analyzer.
July	31-Jul-24	431167	Stony Mountain	The TRS, THC/NMHC/CH4, and NO2 analyzers at the Stony Mountain air monitoring station (AMS) operated for less than 90% of July 2024, due to HVAC issues causing extreme station temperatures.	The HVAC unit in the AMS failed to maintain a consistent station temperature throughout the month of July. Fluctuating station temperatures during the heat wave in the region affected the normal operations of the TRS, THC/NMHC/CH4, and NO2 analyzers resulting in periodic data loss. The WBEA performed several maintenance activities on each analyzer throughout the month of July to return to normal operations. To mitigate the station temperature issues, WBEA technicians installed two portable air conditioning units. Additionally, a third-party HVAC technician was procured to resolve the underlying HVAC issue. Data for the incident period of July 3 through 27 was invalidated for a total of 194, 172, and 444 hours for TRS, THC/NMHC/CH4, and NO2 analyzers, respectively.	To mitigate the station temperature issues, WBEA technicians installed two portable air conditioning units. Additionally, a third-party HVAC technician was procured to resolve the underlying HVAC issue.
July	20-Aug-24	431988	Fort Hills	The THC/NMHC/CH4 analyzer at Fort Hills air monitoring station (AMS) operated for less than 90% of July 2024, due to analyzer linearity issues.	On July 5, the THC/NMHC/CH4 analyzer failed the low point on the NMHC channel during the AB EPA audit. The WBEA followed up with an independent internal audit and found comparable issues. After troubleshooting, the issue was resolved by replacement of the analyzer, and its performance was confirmed through calibration, on July 10. During the data validation process, 125 hours of data were invalidated which resulted in 83% operational time for the month of July.	The THC/NMHC/CH4 analyzer was replaced.
July	21-Aug-24	432043	Jackfish 1	The wind speed and wind direction (WS/WD) sensor at Jackfish 1 air monitoring station (AMS) operated for less than 90% of July 2024, due to misalignment of wind direction sensor.	During the daily system check on July 5, it was noted that the WS/WD data at the Jackfish 1 AMS was not comparing well with nearby stations. A site visit was conducted on July 9 and determined the sensor was misaligned. The sensor declination was corrected, and the data issue was resolved that day. The data validation process confirmed the sensor data was valid for 70% of July.	The alignment of the wind cross-arm was corrected.
July	23-Aug-24	432142	Lower Camp	The H2S analyzer at the Lower Camp AMS operated for less than 90% of July 2024, due to intermittently flatlining signal issues.	In early July, the WBEA identified that the H2S analyzer had flatlined intermittently and attempted to troubleshoot the issue with a software update, followed by a calibration. Ongoing monitoring of the analyzer performance indicated an upward trend of span results following the software update. Additional troubleshooting determined a span adjustment had been required, in addition to the calibration, following the software update. The necessary adjustments were subsequently completed. Following data validation, 94 hours of data were invalidated during this incident resulting in an operational uptime time of 86.69% for the month of July.	The WBEA technician updated the software of the analyzer to resolve the issue.

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
July	23-Aug-24	432153	Buffalo Viewpoint	The WS/WD sensor at the Buffalo Viewpoint AMS operated less than 90% of July 2024, due to cross-arm misalignment.	On July 27, during the daily system check, the WBEA identified a discrepancy between the WS/WD data at Buffalo Viewpoint and data from nearby stations. An on-site inspection conducted on July 31 determined that the sensor was misaligned due to damage of the fitting that secured the sensor in place. The fitting was replaced, and the sensor alignment was corrected that day. A total of 112 hours of data were invalidated due to this incident resulting in an operational uptime of 85%.	The cross-arm fitting was replaced and wind sensor direction alignment was corrected.
July	26-Aug-24	432222	Anzac	The THC/NMHC/CH4 analyzer at Anzac AMS operated less than 90% of July 2024, due to multiple different issues.	Several events associated with the operation of the analyzer totaled 77 hours of downtime, resulting in an operational uptime of 88.6%, as follows: On July 1, a degrading analyzer pump was identified, and the pump was replaced. A total of 12 hours of data were invalidated due to this incident. On July 15, a leak in the support gas cylinder regulator was identified and maintenance was performed to replace the cylinder. A total of 29 hours of data were invalidated due to this incident. Beginning on July 23, the instrument's baseline was within acceptable AMD criteria, however, the data appeared to be excessively noisy, and the baseline was dipping. Troubleshooting included actuator replacement, analyzer recalibration, and span adjustments, however, the issue persisted. Ultimately, the analyzer was replaced on August 4, and its performance was confirmed. A total of 36 hours of data were invalidated due to this incident.	The THC/NMHC/CH4 analyzer was replaced.
August & September	18-Sep-24	433165	Patricia McInnes	The NH3 analyzer at Patricia McInnes air monitoring station (AMS) operated less than 90% of August and September 2024, due to slow analyzer response.	On August 23, during the daily system check, it was noted that the NH3 span did not reach span target. The WBEA investigated the issue from August 23 to September 3; however, no root cause could be identified. On September 4, the analyzer, converter, and pump were replaced, the analyzer performance was verified through a multi-point calibration, and normal operation resumed. During the data validation process, 235 hours of data were invalidated during this incident.	The analyzer was replaced along with its sample pump and convertor.
August	23-Sep-24	433354	Anzac	The THC/NMHC/CH4 analyzer at Anzac AMS operated less than 90% of August 2024, due to unstable baseline issues.	Several events associated with the operation of the analyzer totaled 94 hours of downtime, resulting in an operational uptime of 87.4%, as follows: -On August 1, the daily system check confirmed the analyzer was exhibiting an unstable baseline trend. Maintenance was completed to adjust the cylinder pressure and replace the actuator; however, the issue persisted, and the analyzer was replaced on August 3, with normal operation resuming on August 4. A total of 55 hours of data were invalidated due to this incident. -On August 5, a contaminated support gas cylinder was identified. This cylinder was replaced on August 6, which contributed an additional 5 hours of invalidated data. -On August 26, the daily system check confirmed the analyzer was again exhibiting an unstable baseline trend. Maintenance was completed to adjust the support gas cylinder pressures which resulted in additional 34 hours of invalidated data.	The field maintenance was completed to replace the analyzer and support gases.
September	18-Sep-24	433165	Patricia McInnes	The NH3 analyzer at Patricia McInnes air monitoring station (AMS) operated less than 90% of August and September 2024.	On August 23, during the daily system check, it was noted that the NH3 span did not reach span target. The WBEA investigated the issue from August 23 to September 3; however, no root cause could be identified. On September 4, the analyzer, converter, and pump were replaced, the analyzer performance was verified through a multi-point calibration, and normal operation resumed. During the data validation process, 235 hours of data were invalidated during this incident.	Analyzer was replaced on September 4.
September	26-Sep-24	433509	Stony Mountain	The precipitation sensor at the Stony Mountain air monitoring station (AMS) operated for less than 90% of September 2024 due to communication failure.	On September 11, during a routine system check, the WBEA detected a communication failure between the data acquisition system and the precipitation sensor. In response, the data logger was reset on the same day, which successfully restored communication. However, between September 12 and September 20, the data acquisition system continued to experience intermittent failures. To address the ongoing issue, the data logger was replaced on September 20 and communication resumed. During the monthly data validation process a total of 149 hours of data in September were invalidated due to this issue.	The data logger was replaced on September 20 and communication was restored.

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
September	07-Oct-24	433939	Fort Hills	The THC/NMHC/CH4 analyzer at Fort Hills air monitoring station (AMS) operated for less than 90% of September 2024, due to unstable baseline trend.	During September, the THC/NMHC/CH4 analyzer displayed an unstable baseline trend. The WBEA completed several maintenance procedures, including multiple adjustments to the window timing, recalibrations to adjust zero and span, and increased pressure in the support gas cylinders. Despite maintenance efforts, the issue remained unresolved. As a result, the analyzer was replaced on September 25, and its operation was subsequently verified. During the data validation process, 126 hours of data were invalidated due to this incident.	The analyzer was replaced on September 25, and normal operations resumed.
September	11-Oct-24	434118	Anzac	The relative humidity (RH) sensor at the Anzac air monitoring station (AMS) operated less than 90% of September 2024, due to over-ranging.	During routine daily system checks, it was identified that the RH measurements were over-ranging periodically, with the output signal of the sensor displaying values beyond 100%. On September 17, the RH sensor was replaced, and normal operations resumed. Data was invalidated during periods when RH measurements were inconsistent with comparable data in the WBEA ambient network, resulting in a total of 90 hours of invalid data.	The sensor was replaced on September 17.
September	26-Sep-24	434663	Fort Chipewyan	The precipitation sensor at the Fort Chipewyan air monitoring station (AMS) operated for less than 90% of September 2024, due to communication failure.	On September 5, during a routine system check, the WBEA detected that there was no data coming in for the precipitation sensor. Initial investigations were conducted on September 4; however, the root cause of the issue remained undetermined. Due to the AMS's remote location, it was decided that further troubleshooting would take place during an upcoming visit from an in-house technician. The issue was not addressed until September 17, when it was confirmed that the sensor was unresponsive. Following a reboot of the sensor, normal operations were restored. During the monthly data validation process a total of 317 hours of data in September were invalidated due to this issue.	The sensor was rebooted on September 17 and normal operations resumed.
October	29-Oct-24	434706	Stony Mountain	The wind speed and wind direction (WS/WD) sensor at the 20-meter elevation at Stony Mountain AMS operated less than 90% of October 2024, due to frozen sensor.	Throughout October, the WS/WD sensor froze due to weather conditions, resulting in inaccurate data. The sensor returned to normal operation when weather conditions changed, and the sensor thawed. Data from the freezing events were invalidated for a total of 79 hours, resulting in a sensor operational time of 89% for October.	N/A
October	04-Nov-24	434889	Jackfish 1	The wind speed and wind direction (WS/WD) sensor at the Jackfish 1 AMS operated less than 90% of October 2024, due to frozen sensor.	Throughout October, the WS/WD sensor froze due to weather conditions, resulting in inaccurate data. The sensor returned to normal operation when weather conditions changed, and the sensor thawed. Data from the freezing events were invalidated, resulting in a sensor operational time of 88% for October.	N/A
October	13-Nov-24	435156	Surmont 2	The wind speed and wind direction (WS/WD) sensor at the Surmont 2 AMS operated less than 90% of October 2024, due to frozen sensor.	Throughout October, the WS/WD sensor froze due to weather conditions, resulting in inaccurate data. The sensor returned to normal operation when weather conditions changed, and the sensor thawed. Data from the freezing events were invalidated, resulting in a sensor operational time of 88% for October.	N/A
November	17-Dec-24	436182	Stony Mountain	The wind speed and wind direction (WS/WD) sensor at the 10-meter elevation at Stony Mountain AMS operated less than 90% of December 2024, due to sensor not reading properly.	On December 3, the WS/WD sensor was not reading properly so the tower was lowered for troubleshooting. The pulley mechanism was not operating normally, and in addition, the sensor was frozen to the tower crossarm due to weather conditions. On December 18, the pulley was repaired, and the sensor was properly deployed. Data from the event was invalidated for a total of 340 hours, resulting in a sensor operational time of 46% for December.	The sensor was repaired.
November	06-Dec-24	435901	Mannix	The relative humidity (RH) sensor at the 75m elevation at the Mannix air monitoring station (AMS) operated less than 90% of November 2024, due to over-ranging.	During monthly data validation, it was identified that the RH sensor data at the 75m elevation was intermittently out of normal range. The WBEA relies on a third-party contractor for sensor replacement, which is subject to their availability. On November 9, sensor replacement was attempted but was unsuccessful due to instrument communication errors. Data was invalidated during periods when RH measurements were inconsistent with comparable sensors in the WBEA ambient network, resulting in 86.67% operational time for November.	The WBEA is currently working with the contractor to schedule their return at the earliest available opportunity.
November	06-Dec-24	435904	Fort McKay South	The THC/NMHC/CH4 analyzer at the Fort McKay South AMS operated for less than 90% of November 2024, due to unstable baseline response.	During the month of November, the THC/NMHC/CH4 analyzer displayed periods of unstable baseline response and days when the daily QA span check failed to meet AMD criteria. WBEA performed maintenance throughout November to adjust the span response and the chromatogram window, and to replace the actuator in the analyzer. The problem persisted prompting analyzer replacement on November 25. Data from periods of maintenance and unstable operation were invalidated for a total of 98 hours, resulting in an analyzer operational time of 86.4% for November.	Replaced actuator and adjusted window timing.

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
November	12-Dec-24	436050	Fort Chipewyan	The routine monthly calibration was not conducted on the PM2.5 analyzer at Fort Chipewyan AMS for the month of November 2024, due to malfunction of the instrument used for calibration.	The routine monthly calibration for PM2.5 was attempted on November 29; however, it was not completed due to a malfunction of the instrument used for calibration of this analyzer. The WBEA worked with the local technicians to arrange for delivery of a replacement instrument and to reschedule the calibration. The calibration was completed on December 10, 2024. The data validation for November confirmed that the monthly calibrations performed prior to November, on October 22, and after, on December 10, both met the AMD calibration criteria, and daily quality checks during this period were also within AMD criteria; trending closely with the nearest station, Fort Hills, located 219 km south. In addition, there were no ground level concentration exceedances of the maximum 24-hour Alberta Ambient Air Quality Objective (29 µg/m³) and the 1-hour Alberta Ambient Air Quality Guideline (80 µg/m³) for the Fort Chipewyan or Fort Hills station, or any station across the network for the month of November. The highest maximum 24-hour and 1-hour concentration reported at Fort Chipewyan for November was 14.2 µg/m³ and 28.7 µg/m³, respectively.	N/A
November	12-Dec-24	436051	Athabasca Valley	The barometric pressure (BP) sensor at Athabasca Valley AMS operated less than 90% of November 2024, due to local power outage.	On November 23, a local power outage occurred, impacting the station and causing the BP sensor signal to flatline. The WBEA reset the sensor, verified its performance, and resolved the issue on November 27. Data from this incident was invalidated for a total of 92 hours, resulting in an operational time of 87%.	Reset sensor on November 27.
November	13-Dec-24	436107	Conklin	The THC/NMHC/CH4 analyzer at the Conklin AMS operated for less than 90% of November, due to unstable baseline.	During daily system checks on November 16 and 17, the THC/NMHC/CH4 analyzer displayed unstable baseline readings and span response. The WBEA performed maintenance to adjust the span response and to replace the sample inlet filter. The problem persisted prompting analyzer replacement on November 18. Data from this incident were invalidated, resulting in an analyzer operational time of 89% for November.	Analyzer was recalibrated to adjust the span on November 18.
November & December	19-Dec-24	436271	Fort McKay - Bertha Ganter	The wind speed and wind direction (WS/WD) sensor at Bertha Ganter – Fort McKay AMS operated less than 90% of November and December 2024, due to odd signals.	Intermittently throughout November and December, the WS/WD sensor displayed odd signal outputs prompting an investigation. On December 4, the sensor was replaced, and normal operations resumed. Data from the event was invalidated for a total of 160 hours in November and 87 hours in December.	Sensor was replaced on December 4.
December	17-Dec-24	436182	Stony Mountain	The wind speed and wind direction (WS/WD) sensor at the 10-meter elevation at Stony Mountain AMS operated less than 90% of December 2024, due to inconsistent wind speed signals.	On December 3, the WS/WD sensor was not reading properly so the tower was lowered for troubleshooting. The pulley mechanism was not operating normally, and in addition, the sensor was frozen to the tower crossarm due to weather conditions. On December 18, the pulley was repaired, and the sensor was properly deployed. Data from the event was invalidated for a total of 340 hours, resulting in a sensor operational time of 46% for December.	Wind speed sensor was repaired on December 18.
December	08-Jan-25	436647	Fort McKay South	The wind speed and wind direction (WS/WD) sensor at the 10-meter elevation at Fort McKay South AMS operated less than 90% of December 2024, due to freezing wind speed sensor.	Throughout the month of December, the WS/WD sensor froze due to weather conditions, resulting in intermittent flatlining. Operation returned to normal once weather conditions changed. Data from these events were invalidated for a total of 83 hours, resulting in an operational time of 89% for December.	N/A
December	14-Jan-25	436819	Mannix	The WS/WD/VWS sensor at the 45-meter, 75-meter and 90-meter elevation at Mannix operated less than 90% of December 2024, due to ice fog events.	In December 2024, ice fog caused intermittent flat-line periods in the WS/WD/VWS sensors at the 45-meter, 75-meter, and 90-meter elevations. The sensors returned to normal operation once weather conditions changed. Following data validation, 95 hours of data were invalidated at the 45-meter elevation, 205 hours at the 75-meter elevation, and 195 hours at the 90-meter elevation. This led to operational times of 87%, 72%, and 74%, respectively.	N/A

Reporting Period	Date Reported	AEP Reference Number	Location	Brief Description	Issue	Remedial Action
December	16-Jan-25	436860	Anzac	The THC/NMHC/CH4 analyzer at Anzac AMS operated less than 90% of December 2024, due to unstable baseline.	During the month of December, the THC/NMHC/CH4 analyzer experienced periods of unstable baseline response and failure of the daily QA span check to meet AMD criteria. A variety of troubleshooting and maintenance was performed throughout December including adjustment to the span response and the chromatogram window, and replacement of the analyzer actuator. The problem persisted prompting analyzer replacement on January 3, 2025. Data from periods of maintenance and unstable operation were invalidated for a total of 121 hours, resulting in an analyzer operational time of 83.7% for December.	The THC/NMHC/CH4 analyzer was replaced on January 3, 2025.
December	17-Jan-25	436899	Janvier	The wind speed and wind direction (WS/WD) sensor at the 20-meter elevation at Janvier AMS operated less than 90% of December 2024, due to freezing weather conditions.	In early December, the WS/WD sensor froze due to weather conditions, resulting in intermittent flatlining. Operation returned to normal once weather conditions changed. Data from these events were invalidated for a total of 88 hours, resulting in an operational time of 89% for December.	N/A
December	28-Jan-25	437200	Lower Camp Met Tower	The WS/WD/VWS at the 100-meter and 163-meter elevation at Lower Camp Met Tower operated less than 90% of December 2024, due to ice fog events.	During the month of December 2024, the output signals from the WS/WD/VWS sensors at the 100-meter and 163-meter elevations experienced intermittent flat-line periods. These disruptions were likely caused by ice fog affecting the sonic sensors. The sensors returned to normal operation once the weather conditions improved. During the data validation process, a total of 92 hours of data at the 100-meter elevation and 196 hours at the 163-meter elevation were invalidated due to these sensor interruptions.	N/A

WOOD BUFFALO ENVIRONMENTAL ASSOCIATION

CONTINUOUS AMBIENT AIR QUALITY MONITORING PROGRAM ANNUAL REPORT

APPENDIX III: 2011-2024 WBEA DATA COMPARED TO LARP TRIGGERS AND LIMITS 2024

Operations, Data Collection,
QA/QC, Data Validation and Reporting by:
Wood Buffalo Environmental Association
Fort McMurray, Alberta

March 2025

Comparison of WBEA NO₂ 2011 to 2024 Data With LARP Triggers and Limits (all data as ppb)

Data Collection less than 12 months

A vertical color bar representing NO₂ Annual Average levels. The bar is divided into four horizontal bands: red at the top, yellow in the middle, green in the lower-middle, and blue at the bottom. The word "Limit" is written in white in the center of the yellow band, and "Level 3 Trigger" and "Level 2 Trigger" are written in white in the center of the green band.

NO_2 Hourly 99th Percentile	
Level 4 Trigger	9
Level 3 Trigger	6
Level 2 Trigger	3

Comparison of WB EA SO₂ 2011 to 2024 Data With LARP Triggers and Limits (all data as ppb)
